

Lab 13 – Build an IT Helpdesk Ticket Assistant

Lab Overview

Many organizations receive a large number of IT support requests every day. Employees often need assistance with laptop issues, software installation, VPN connectivity, or email access. Instead of collecting this information manually through emails or phone calls, a Copilot can guide employees through a structured conversation and capture all the required details.

In this lab, you will build an **IT Helpdesk Ticket Assistant** using the **latest Microsoft Copilot Studio authoring experience**. The assistant will collect information through a **multi-turn conversation**, store responses in **variables**, and display a **support ticket summary** before ending the conversation.

Learning Objectives

By the end of this lab, you will be able to:

- Create a new Topic in Copilot Studio.
 - Configure Trigger Phrases.
 - Build a multi-turn conversation using **Question** nodes.
 - Capture user responses in variables.
 - Use different response types (Multiple Choice and Text).
 - Display a dynamic support ticket summary using variables.
-

Business Scenario

Your organization's IT department wants employees to submit support requests through a Copilot. The assistant should collect the necessary information and generate a ticket summary that can later be integrated with a ticketing system such as ServiceNow or Power Automate.

Expected Conversation

Employee

I need IT support.

Copilot

What type of issue are you experiencing?

- Laptop Issue
- Software Installation
- VPN Access
- Email Issue

Employee

VPN Access

Copilot

Please enter your Employee ID.

Employee

EMP1025

Copilot

Please describe the issue.

Employee

Unable to connect to VPN after changing my password.

Copilot

How would you rate the priority of this issue?

- Low
- Medium
- High

Employee

High

Copilot

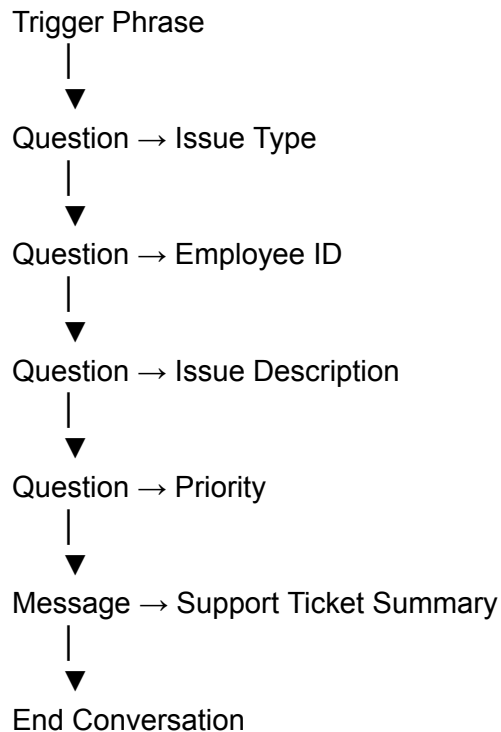

Support Ticket Summary

- Issue Type: VPN Access

- Employee ID: EMP1025
- Issue Description: Unable to connect to VPN after changing my password.
- Priority: High

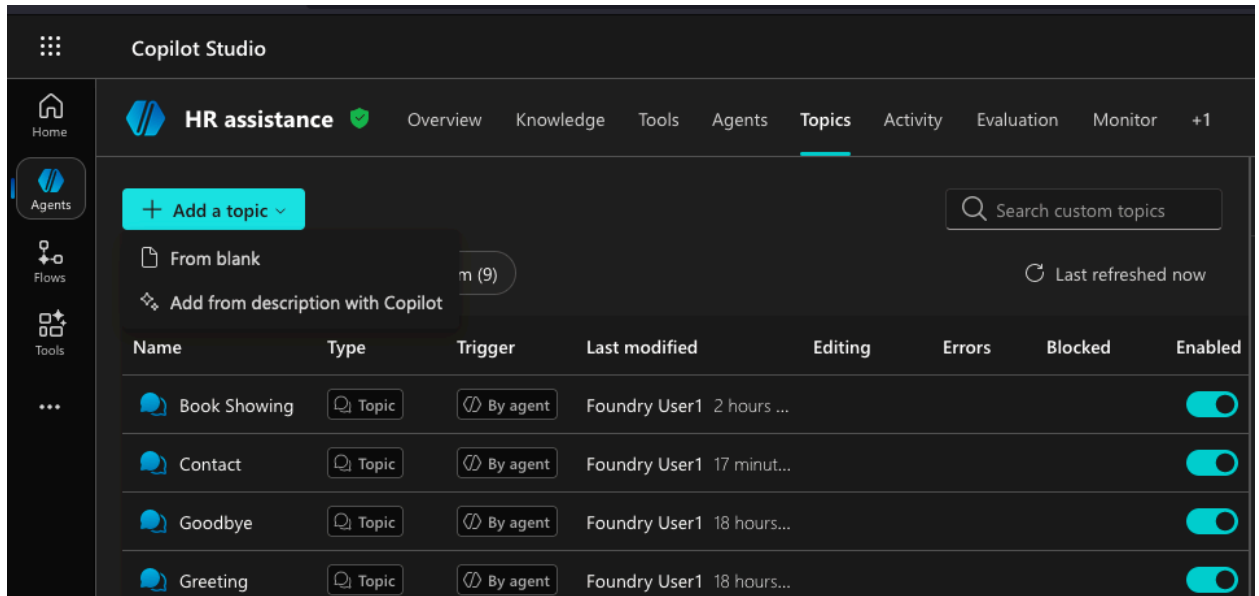

Your support request is ready for submission to the IT Helpdesk.

Conversation Flow

Task 1 – Create a New Topic

1. Open **Microsoft Copilot Studio**.
2. From the left navigation pane, select **Topics**.
3. Select **From blank**.

4. Configure the topic:

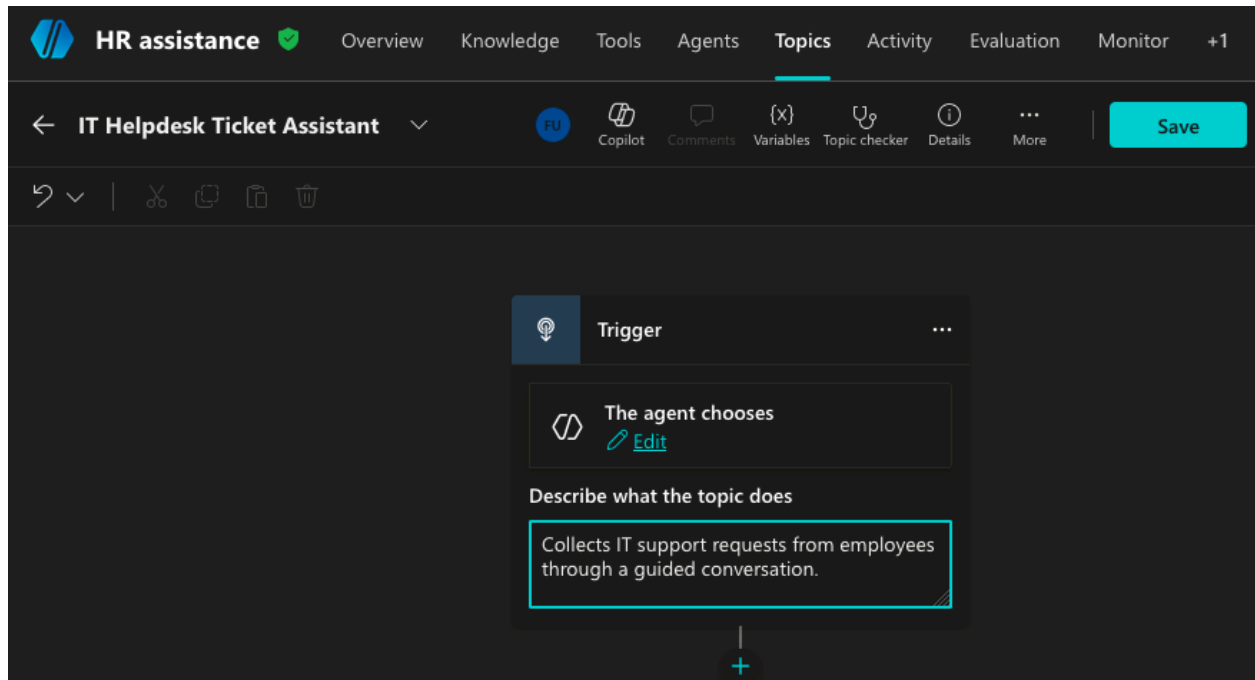

Topic Name: IT Helpdesk Ticket Assistant

Description: Collects IT support requests from employees through a guided conversation.

5. Select **Create**.

Expected Outcome

A new topic named **IT Helpdesk Ticket Assistant** is created.

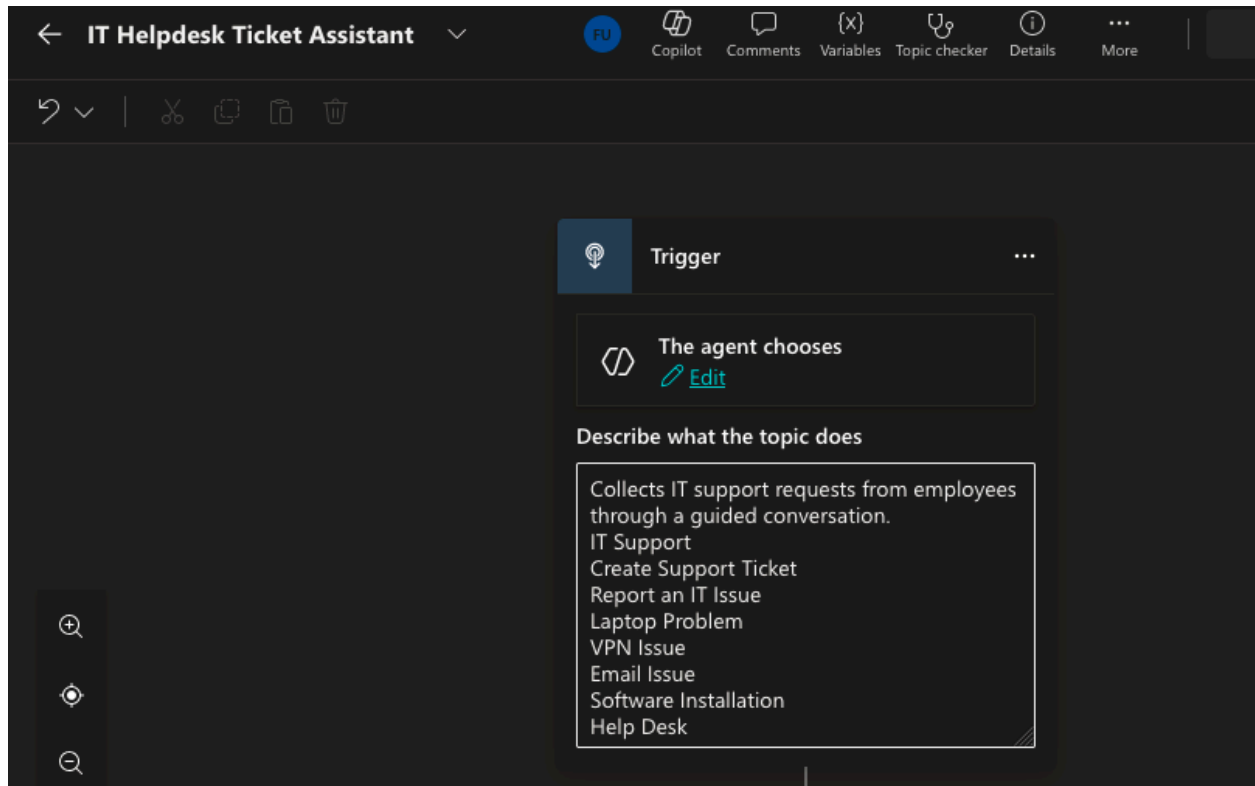

Task 2 – Configure Trigger Phrases

Add the trigger phrases into the "**Describe what the topic does**" field:

- IT Support
- Create Support Ticket
- Report an IT Issue
- Laptop Problem
- VPN Issue
- Email Issue
- Software Installation
- Help Desk

Save the topic.

Task 3 – Collect the Issue Type

1. Select **+ Add node**.
2. Choose **Question**.
3. Enter the following question:

What type of issue are you experiencing?

4. Under **Identify**, select **Multiple choice**.
5. Add these options:
 - Laptop Issue
 - Software Installation
 - VPN Access
 - Email Issue

Important (Latest Copilot Studio)

- The Question node automatically creates a variable to store the user's response.

- Rename the generated variable to **IssueType** using the Variable Properties pane.
-

Expected Outcome

The selected issue type is stored in the **IssueType** variable.

Task 4 – Collect the Employee ID

1. Select **+ Add node**.
2. Choose **Question**.
3. Enter the following question:

Please enter your Employee ID.

4. Under **Identify**, select **User's entire response**.

Important (Latest Copilot Studio)

- A variable is automatically created for this question.
 - Rename the variable to **EmployeeID**.
-

Expected Outcome

The Employee ID is stored in the **EmployeeID** variable.

Task 5 – Collect the Issue Description

1. Select **+ Add node**.
2. Choose **Question**.
3. Enter the following question:

Please describe the issue you are facing.

4. Under **Identify**, select **User's entire response**.

Important

- Rename the automatically generated variable to **IssueDescription**.
-

Expected Outcome

The issue description is stored in the **IssueDescription** variable.

Task 6 – Collect the Priority

1. Select **+ Add node**.
2. Choose **Question**.
3. Enter the following question:

How would you rate the priority of this issue?

4. Under **Identify**, select **Multiple choice**.
5. Add the following options:
 - Low
 - Medium
 - High

Important

- Rename the generated variable to **Priority**.
-

Expected Outcome

The selected priority is stored in the **Priority** variable.

Task 7 – Display the Support Ticket Summary

1. Select **+ Add node**.
2. Choose **Message**.
3. Enter the following message:

Support Ticket Summary

- Employee ID: {EmployeeID}
- Issue Type: {IssueType}
- Issue Description: {IssueDescription}
- Priority: {Priority}

Your IT support request has been recorded and will be reviewed by the IT Helpdesk team.

Important (Latest Copilot Studio)

Do not type variable names manually.

Use **Insert variable ({x})** in the message editor to insert:

- IssueType
- EmployeeID
- IssueDescription
- Priority

This ensures the variables are referenced correctly.

Expected Outcome

The message displays all the information entered by the employee.

Task 8 – Test the Conversation

Open **Test your Copilot**.

Scenario 1

User Input

I need IT support.

Provide the following responses:

Question	Response
Issue Type	VPN Access
Employee ID	EMP1025
Issue Description	Unable to connect to VPN after password reset
Priority	High

Expected Result

The assistant displays a support ticket summary containing all four values.

Scenario 2

User Input

My laptop is not working.

Provide:

Question	Response
Issue Type	Laptop Issue
Employee ID	EMP2041
Issue Description	Laptop does not power on

Priority	Medium
----------	--------

Expected Result

The assistant displays the updated ticket summary with the entered information.
