

Build Multi-turn Conversations

Exercise: Add specific topics of conversation

- Task 1: Enable Orchestration based on generative AI
- Task 2: Create a **single-turn** topic
- Task 3: Test single-turn copilot
- Task 4: Add **multi-turn** topic
- Task 5: Test multi-turn topic.

A Multi-turn Topic is a conversation that **spans multiple back-and-forth interactions** with the user to **collect information**.

Single-turn vs. Multi-turn

Single-turn Topic

User: What are your business hours?

Copilot: We are open Monday to Friday, 9 AM to 6 PM.

One question → One response

Multi-turn Topic

User: I want to register for training.

Copilot: What is your name?

User: Sourabh Taneja

Copilot: Which course would you like to join?

User: Copilot Studio Deep Dive

Copilot: What is your email address?

User: skills4sourabh.taneja@email.com

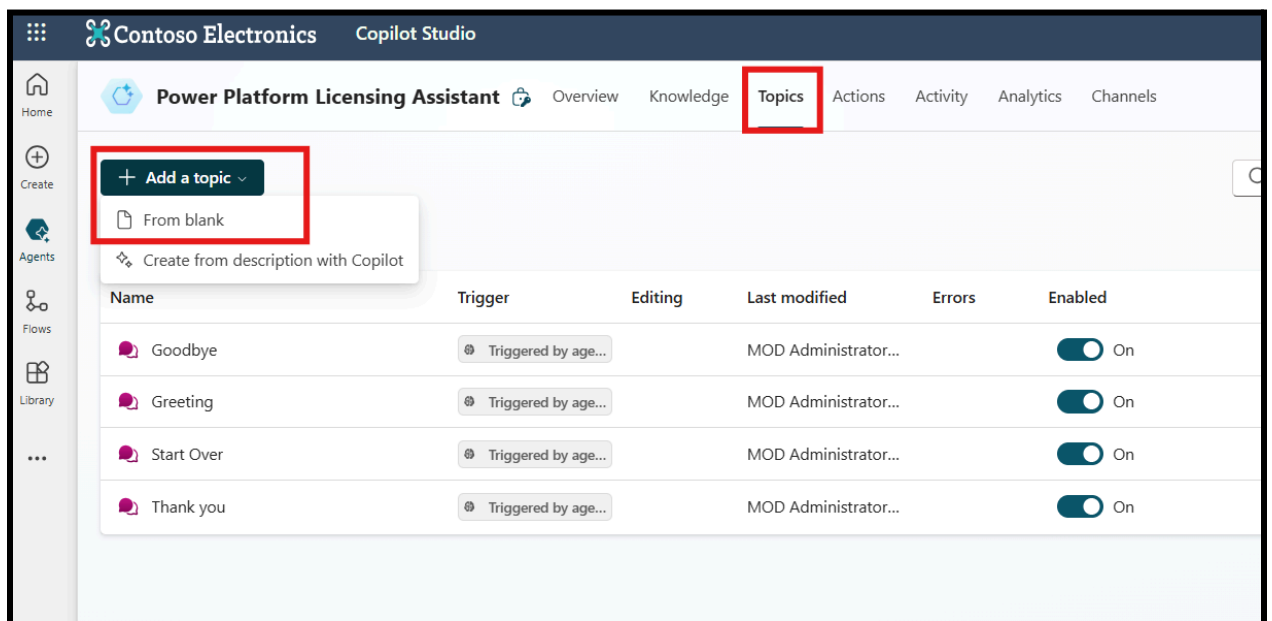

Copilot : Thank you, Sourabh Taneja. Your registration has been submitted.

Multiple questions → Multiple responses → One completed task

Exercise 1: Add specific topics of conversation

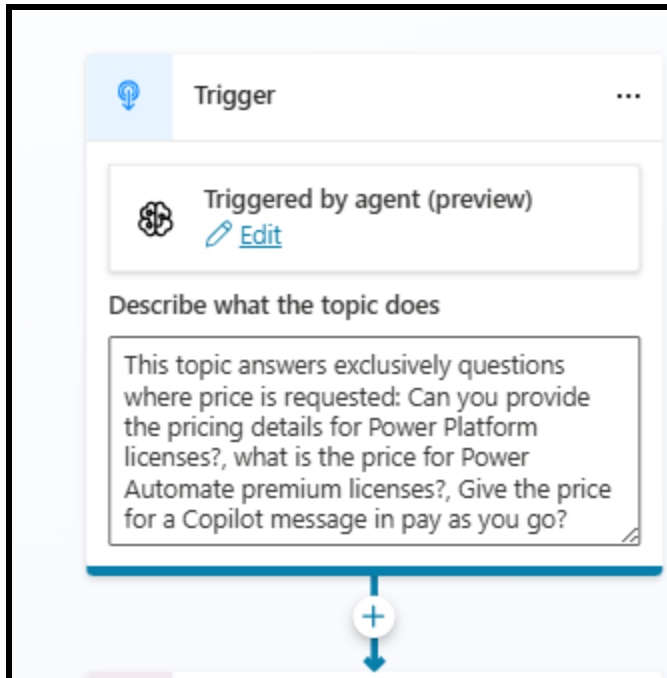

Task 1: Create a single-turn topic

1. To create a new topic, in the upper side of the screen select the '**Topics**' tab, then select '**Add a topic**' and then '**From blank**' to start creating a new custom topic.

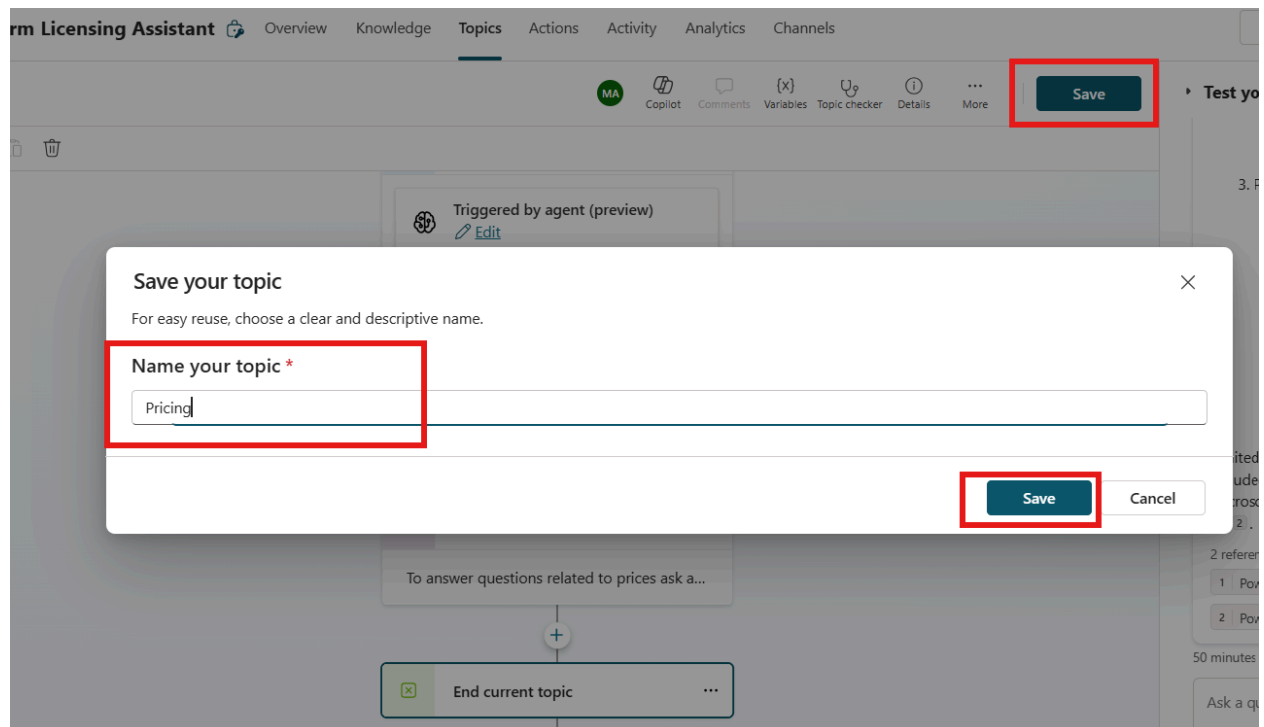

2. In the very first building block of the topic '**Trigger**', write the following in **Describe what the topic does**:

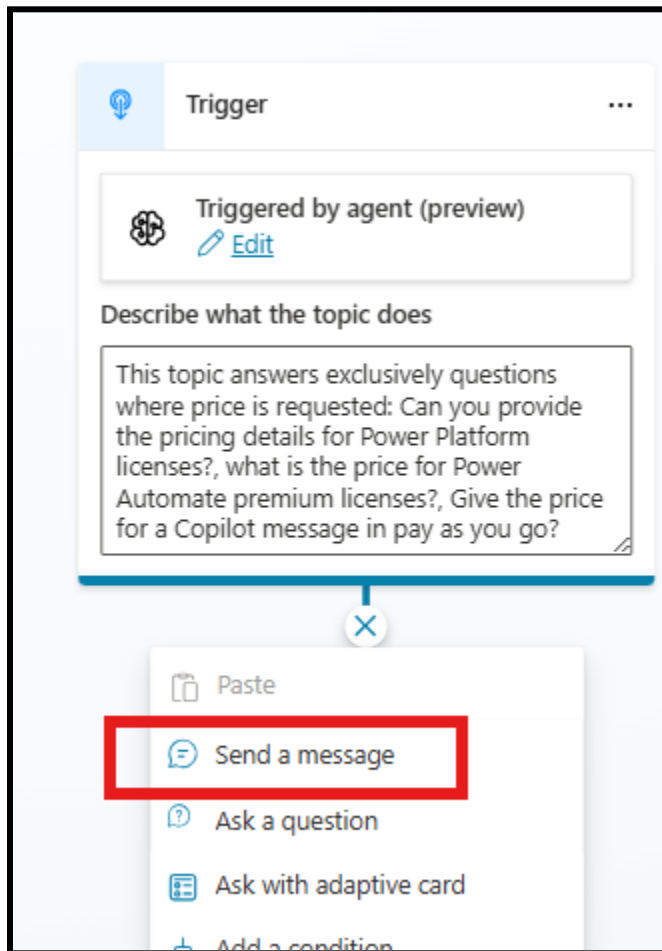

This topic answers exclusively questions where price is requested: Can you provide the pricing details for Power Platform licenses?, what is the price for Power Automate premium licenses?, Give the price for a Copilot message in pay as you go?

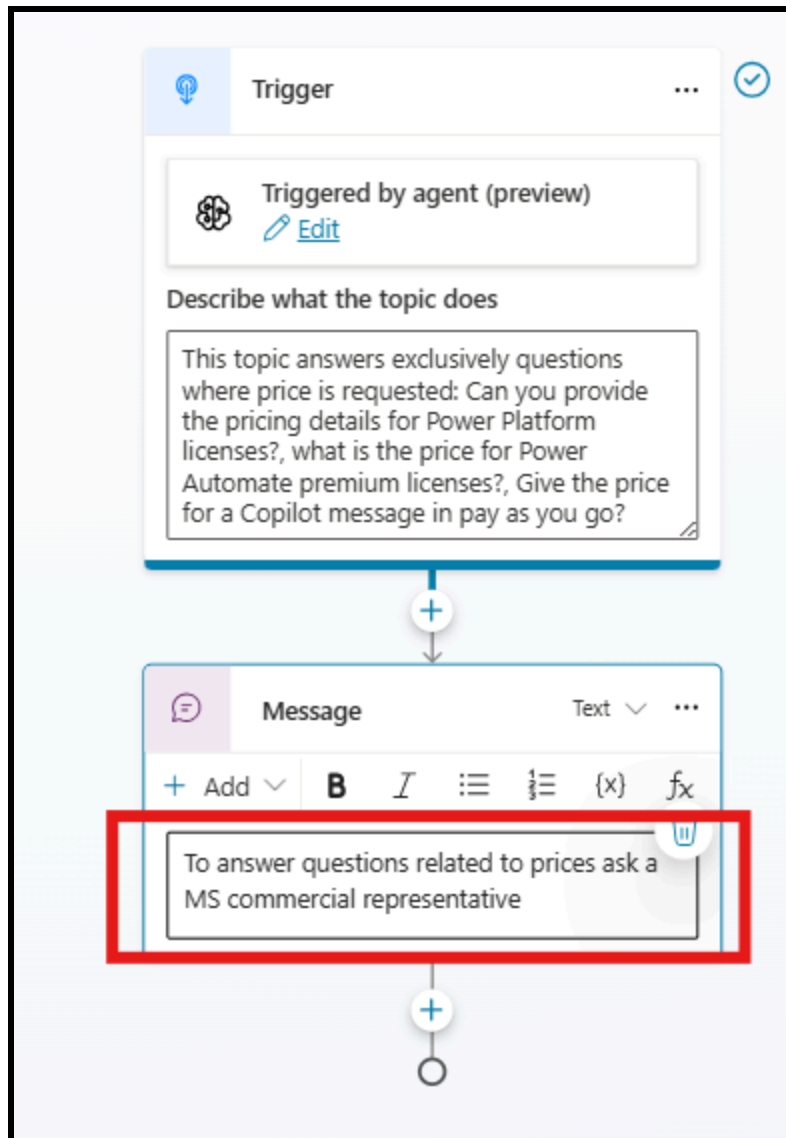

3. Provide a name for the topic - **Pricing** and click the '**Save**' button in the dialog.

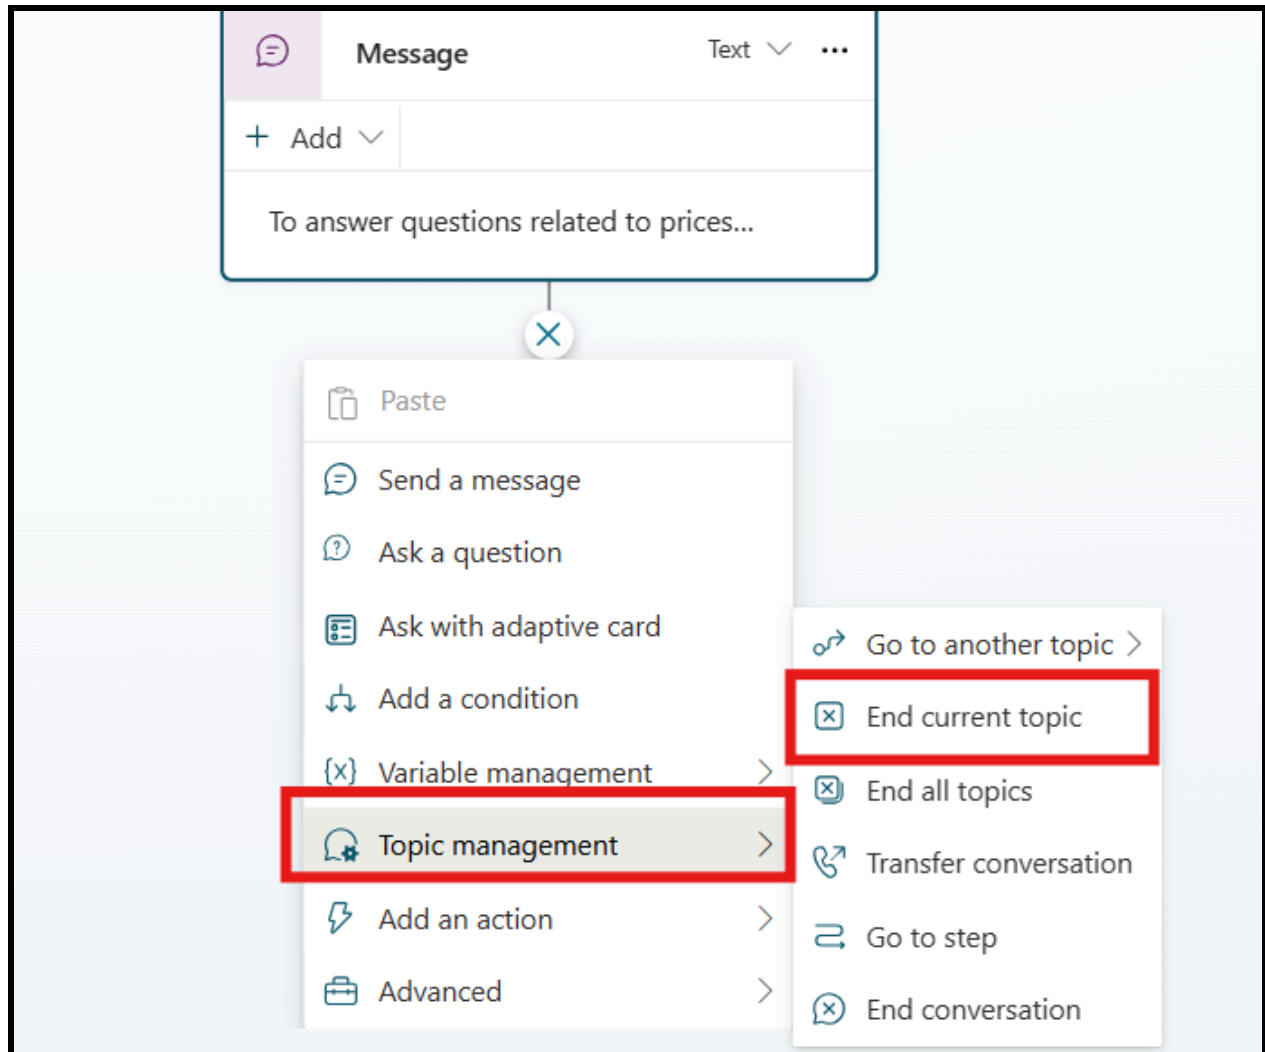

3. Select the **‘+’ button** in the middle of the screen to add **‘Send a message’** action

4. Write in the box the following sentence
To answer questions related to prices ask a MS commercial representative

5. Select again the **+** button to add a 'End current topic' action.

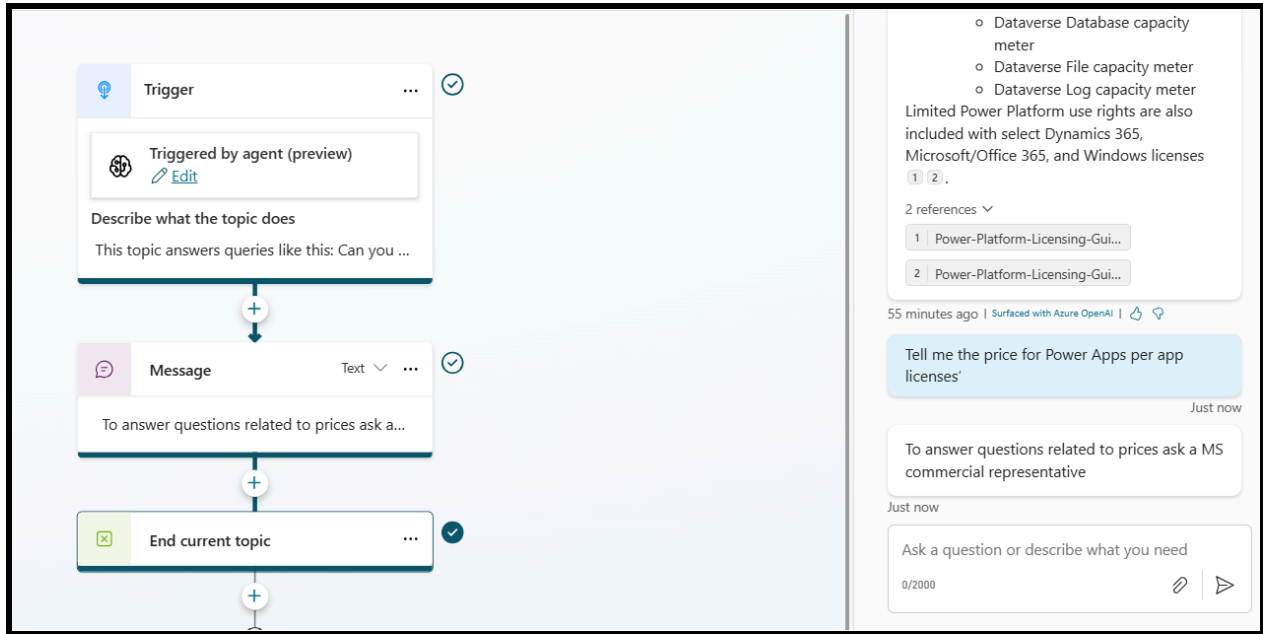

6. Select the 'Save' button in the upper right corner of the designer.

Task 2: Test single-turn topic

1. At the box 'Ask a question or describe what you need' prompt in **Test copilot pane**, type :

Tell me the price for Power Apps per app licenses.

Task 3: Add a multi-turn topic

1. In the upper side of the screen select the **'Topics'** tab, then select **'Add a topic'** and then **'From blank'** to start creating a new custom topic.

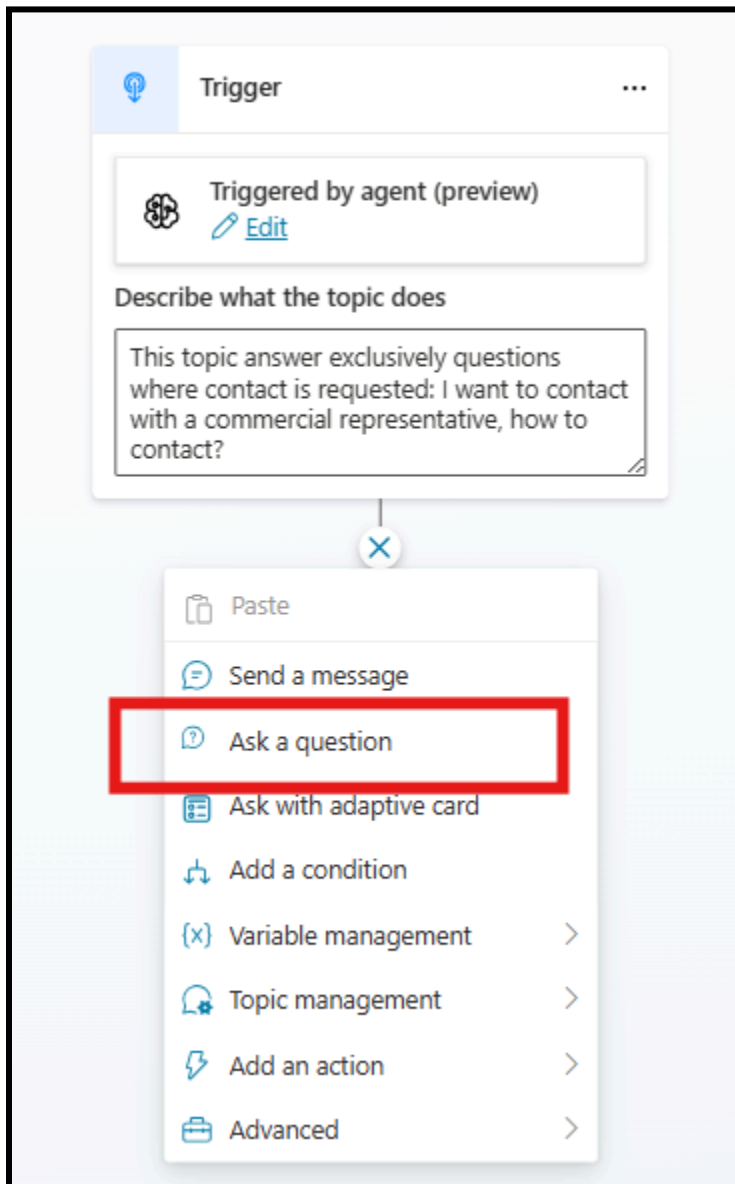

The screenshot shows the Copilot Studio interface for 'Contoso Electronics'. The 'Topics' tab is selected in the top navigation bar. A red box highlights the 'Add a topic' button in the left sidebar, with a dropdown menu showing 'From blank' as the selected option. Below this, a table lists existing topics:

Name	Type	Trigger	Editing	Last modified	Errors	Enabled
Goodbye	Topic	Triggered by age...		MOD Administrator...		On
Greeting	Topic	Triggered by age...		MOD Administrator...		On
Pricing	Topic	Triggered by age...		MOD Administrator...		On
Start Over	Topic	Triggered by age...		MOD Administrator...		On
Thank you	Topic	Triggered by age...		MOD Administrator...		On

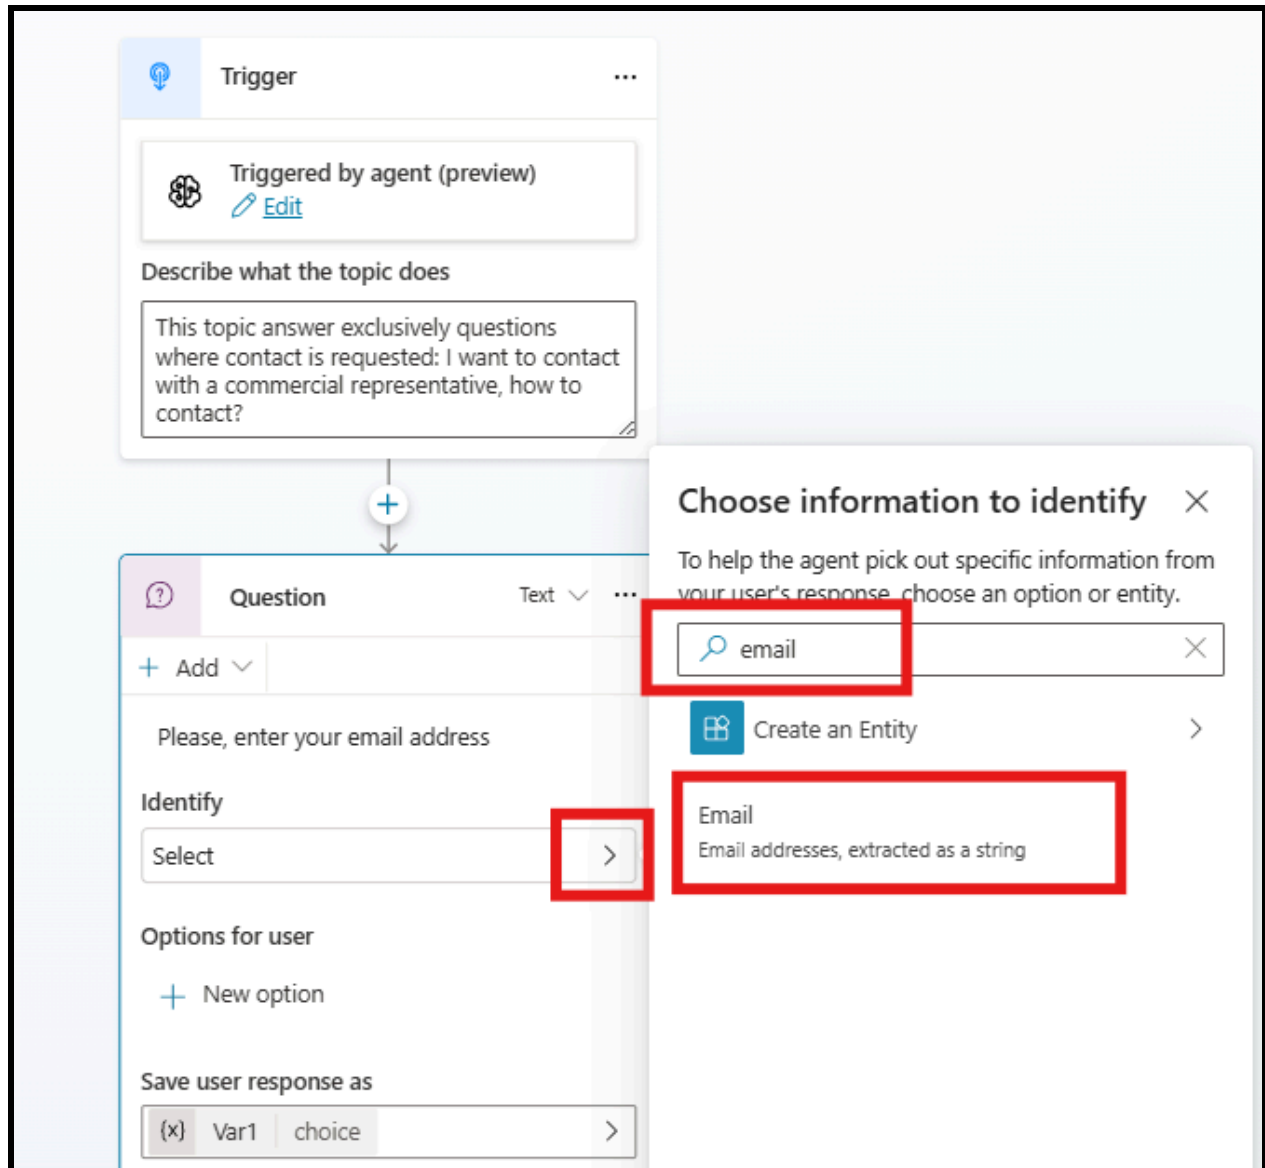

2. In the block **'Trigger'** write the following:
This topic answers exclusively questions where contact is requested: I want to

contact a commercial representative, how to contact?

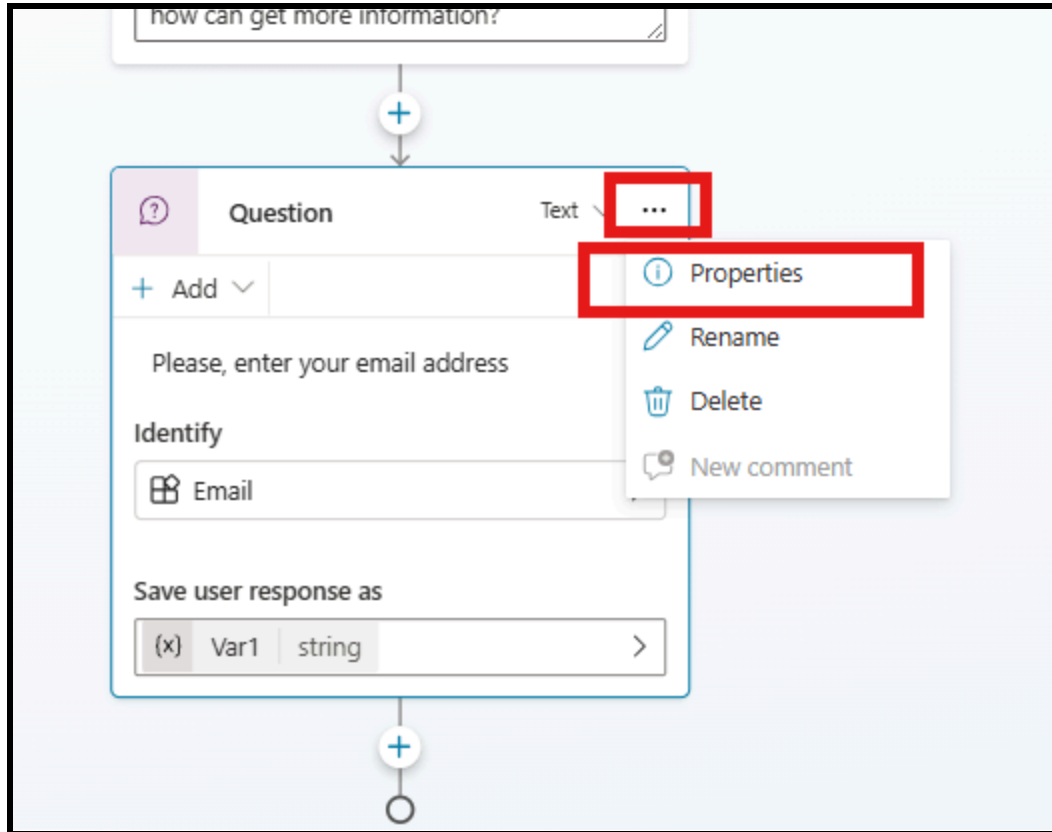

3. Select the '+' button in the middle of the screen to add 'Ask a question' action

4. Provide the following message in text box: **"Please, enter your email address"**
5. Click the arrow below in '**Identify**' to choose information to be identified in the answer. Search for email and select it.

6. Click in the **three dots** upper right corner of the Question action and select **'Properties'**

7. Click in the box '**Interruptions**'

The screenshot displays the Microsoft Bot Framework Designer interface. On the left, a workflow is shown with a 'Trigger' card (light blue header) containing a 'Triggered by agent (preview)' action (with an 'Edit' link) and a text box describing the topic: 'This topic answer exclusively questions where contact is requested: I want to contact with a commercial representative, how to contact?'. An arrow with a '+' icon points down to a 'Question' card (light purple header) with the text 'Please, enter your email address'. On the right, the 'Question properties' panel is open, showing three sections: 'Question behavior', 'Entity recognition', and 'Interruptions'. The 'Interruptions' section is highlighted with a red rectangular border.

Trigger

Triggered by agent (preview)
[Edit](#)

Describe what the topic does

This topic answer exclusively questions where contact is requested: I want to contact with a commercial representative, how to contact?

Question Text

+ Add

Please, enter your email address

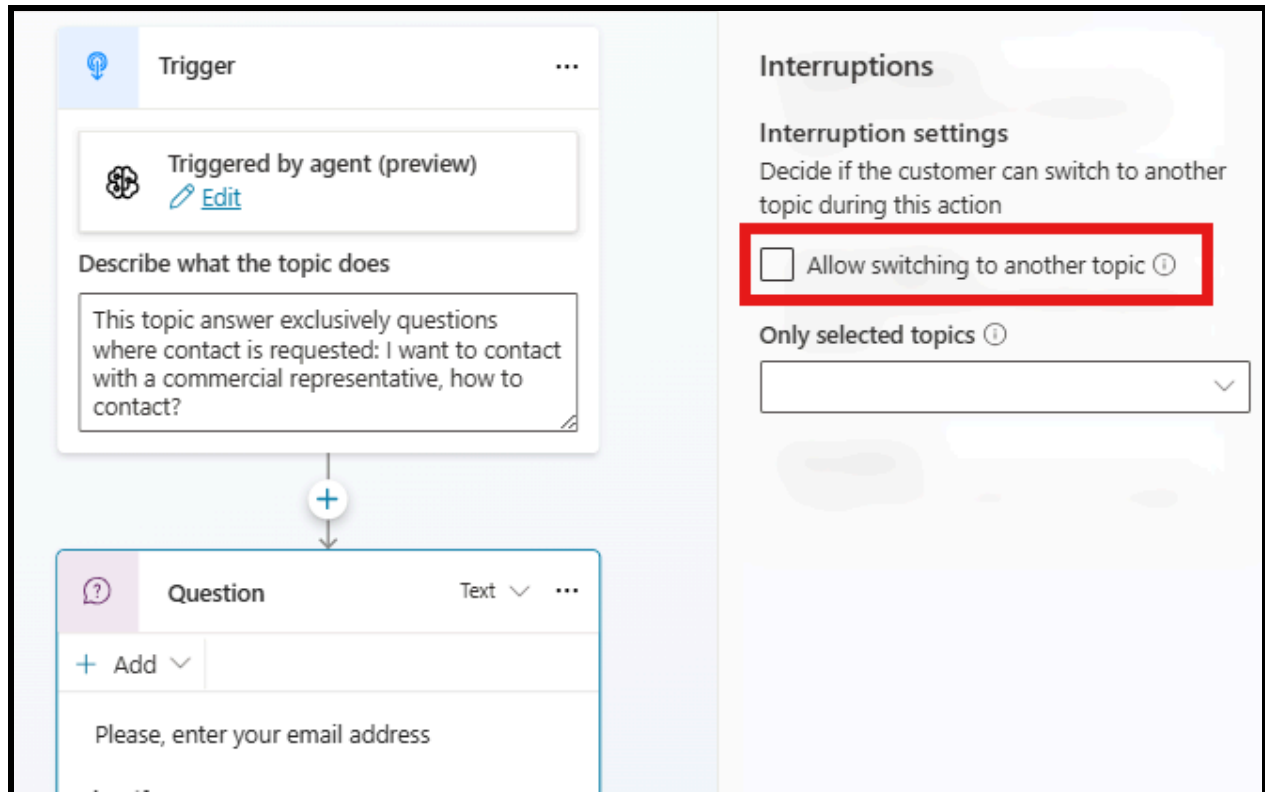

Question properties

Question behavior
Control how and when your bot asks this question

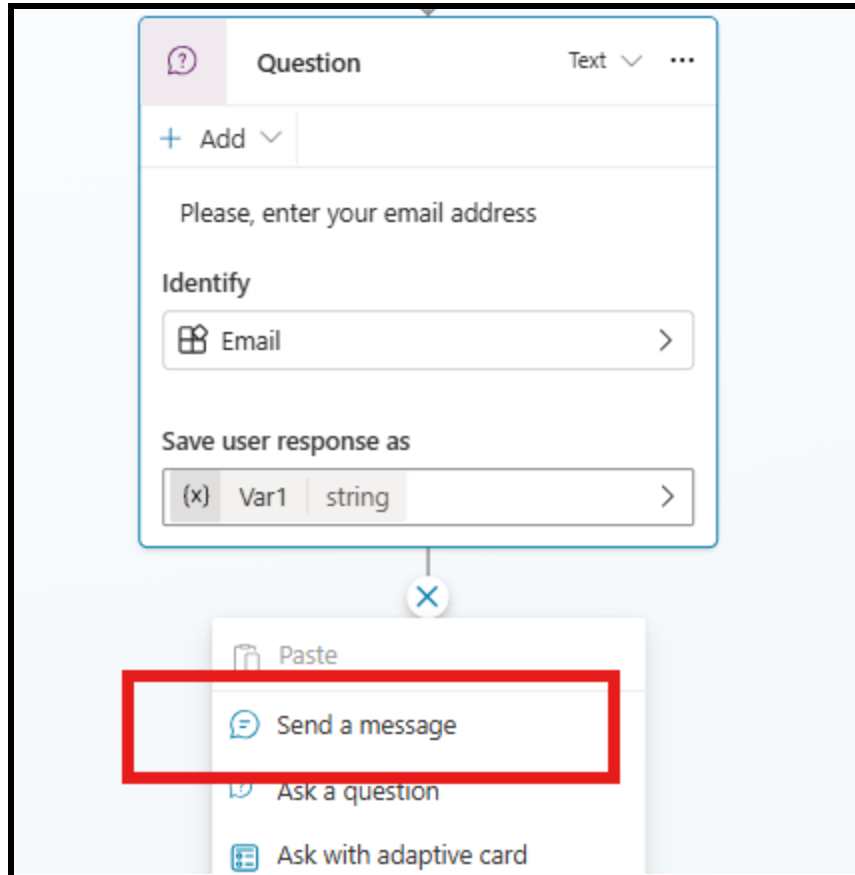

Entity recognition
Additional properties for the entity type being recognized

Interruptions
Configure when this action can be interrupted

8. Uncheck '**Allow switching to another topic**' to avoid jumping to another topic if the answer is not an email.

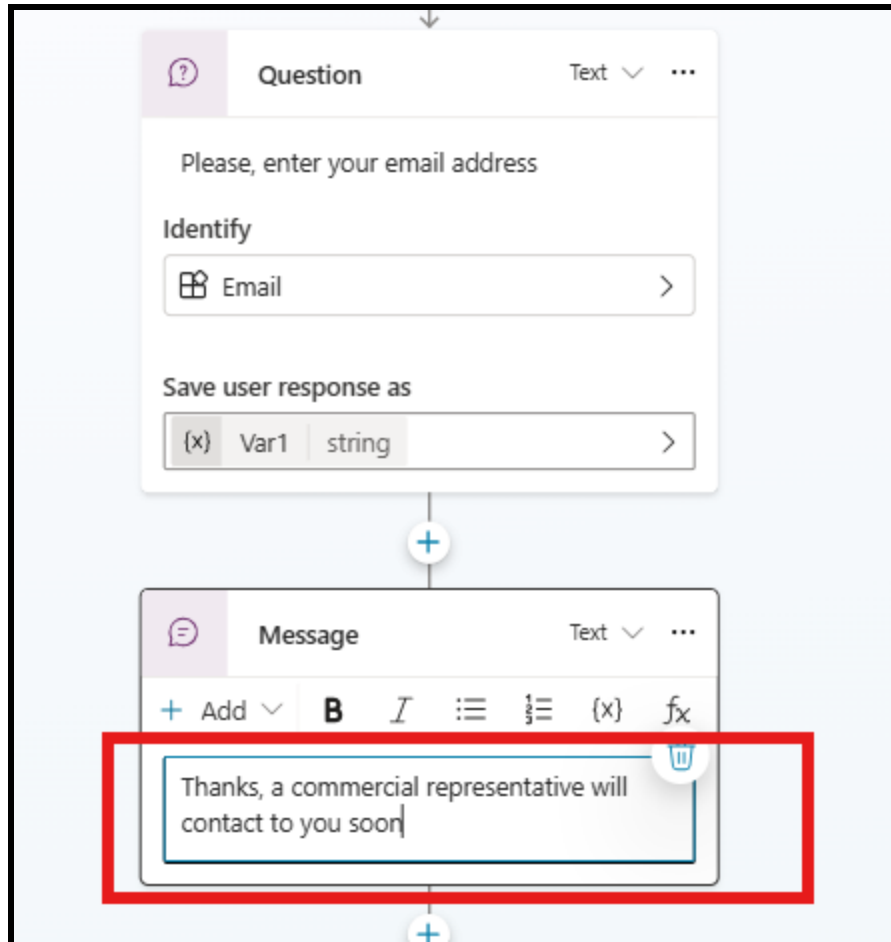

9. Select the **‘+’ button** again in the middle of the screen below the **‘Question’** action box to add **‘Send message’** action.

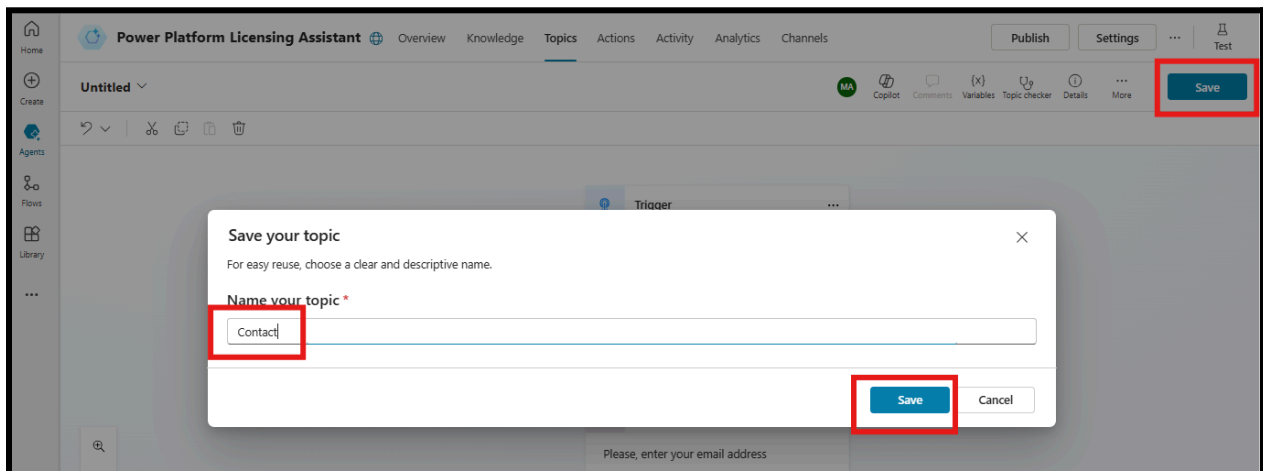

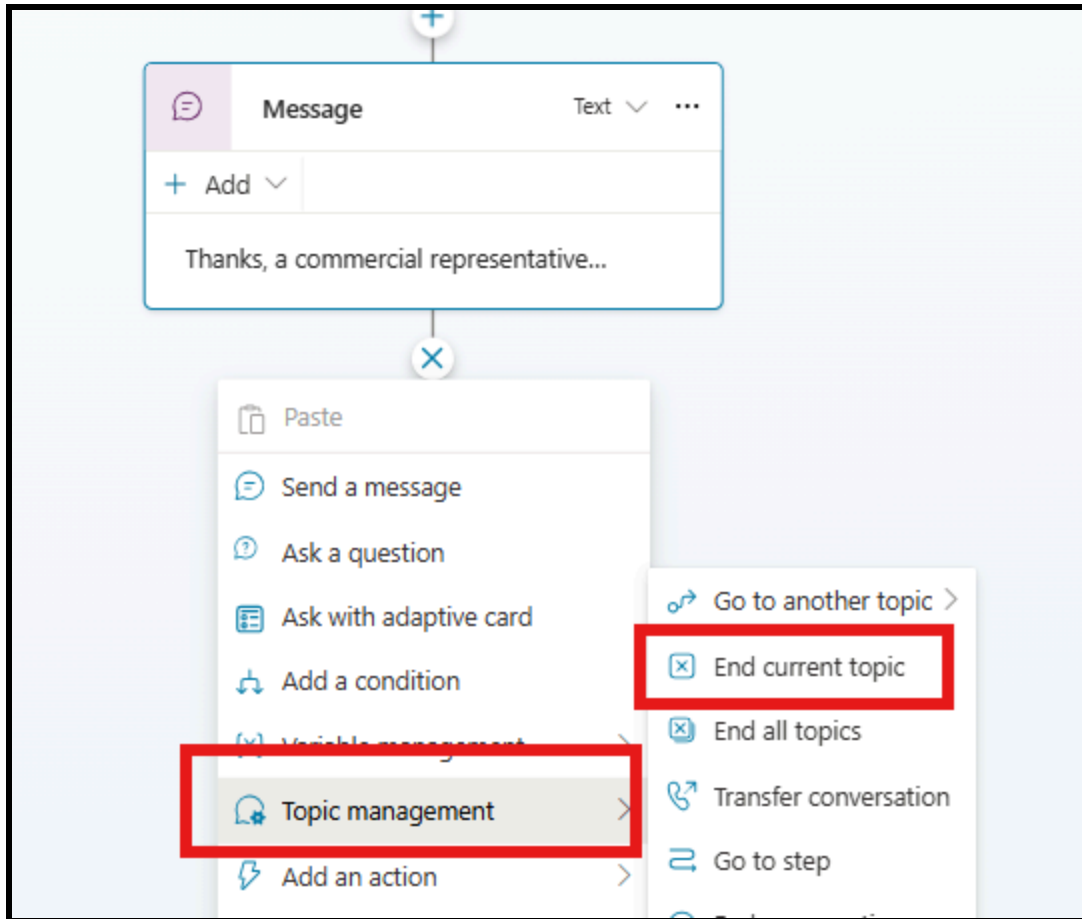

10. Write the following in text box:

Thanks, a commercial representative will contact to you soon

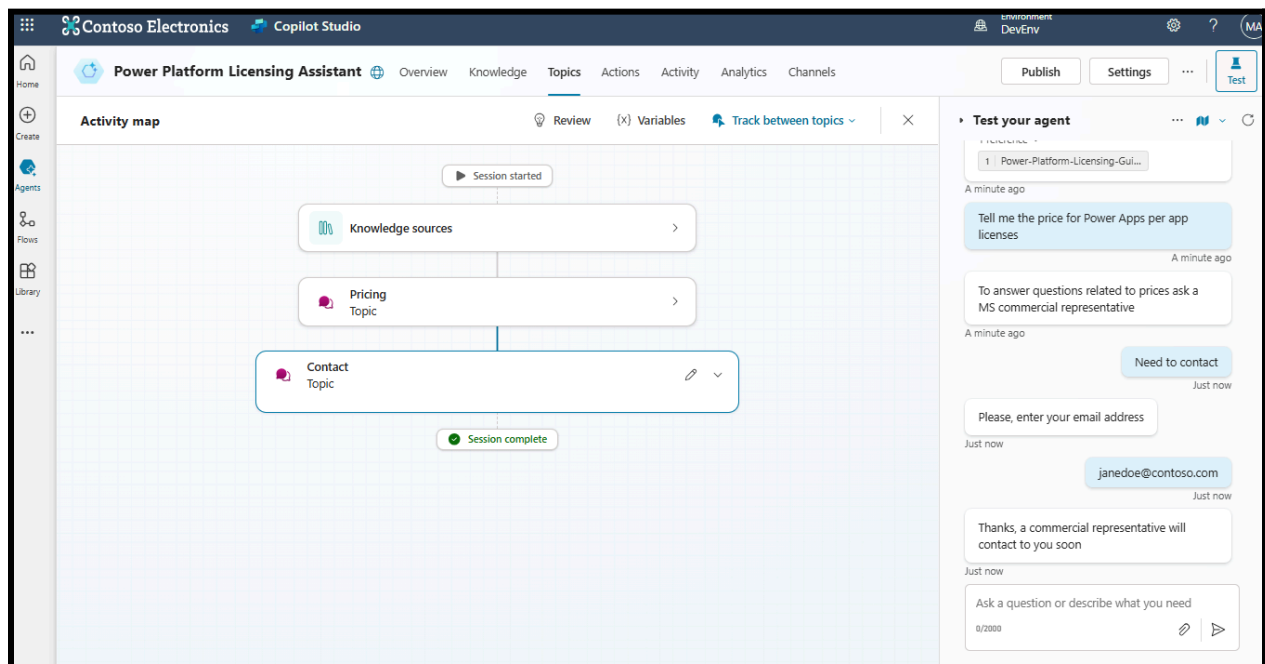

11. Finally, as in former single-turn topic, add an **'End current topic'** action, and **'Save'** the topic with a name (i.e. 'Contact')

Task 4: Test multi-turn topic

1. At the box 'Ask a question or describe what you need' prompt in the Test **copilot** pane, type

Need to contact.

Generative orchestration detected a question to the '**Contact**' topic and played that.
