

Connect a SharePoint Library as a Knowledge Source

Lab Duration: 20 Minutes

Lab Overview

In this lab, you will connect a **SharePoint document library** to your Microsoft Copilot Studio agent. Unlike uploading individual files, connecting SharePoint allows the agent to use documents stored in the library as its knowledge source while respecting Microsoft 365 permissions

Learning Objectives

After completing this lab, you will be able to:

- Connect a SharePoint document library.
 - Configure the knowledge source.
 - Test responses using SharePoint documents.
 - Verify permission-based access.
-

Business Scenario

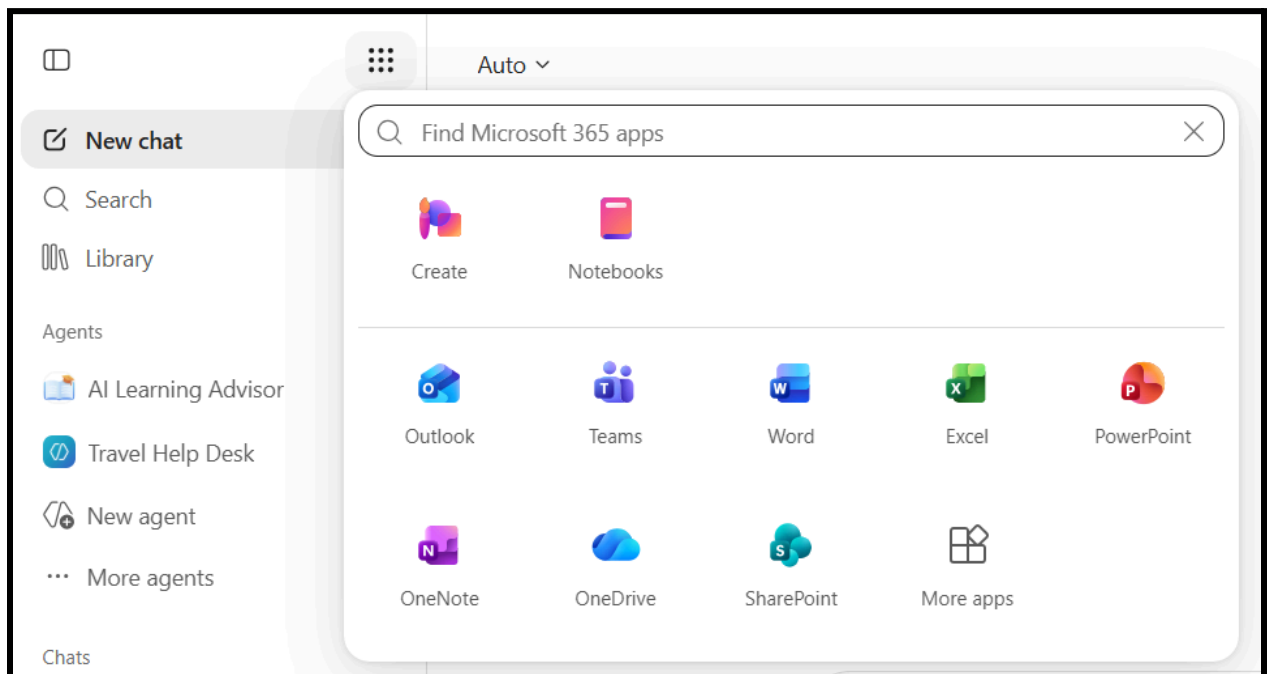

Contoso stores all HR policies, onboarding guides, and employee forms in a SharePoint document library. Instead of uploading every document individually, the HR team wants the Copilot to answer questions directly from the SharePoint library.

Lab Instructions :

Add custom knowledge

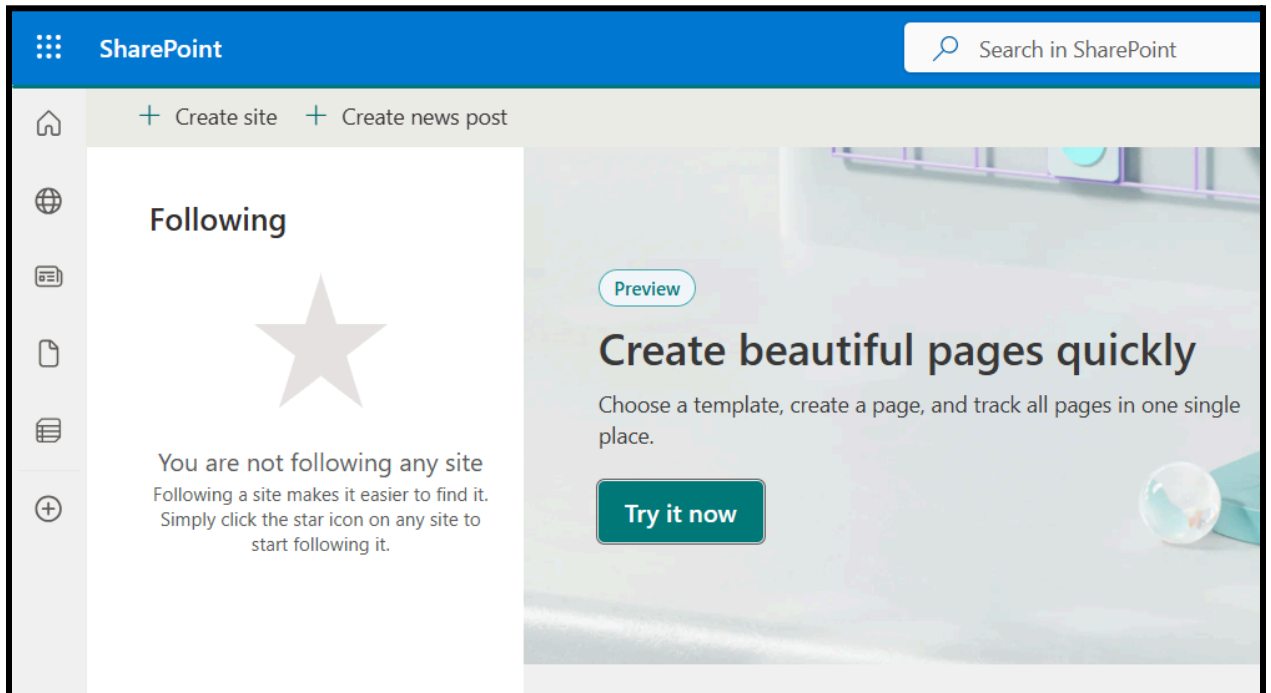

Create a SharePoint site

1. In your web browser, navigate to <https://m365.cloud.microsoft> and sign in with the Microsoft 365 account you're using for this lab.

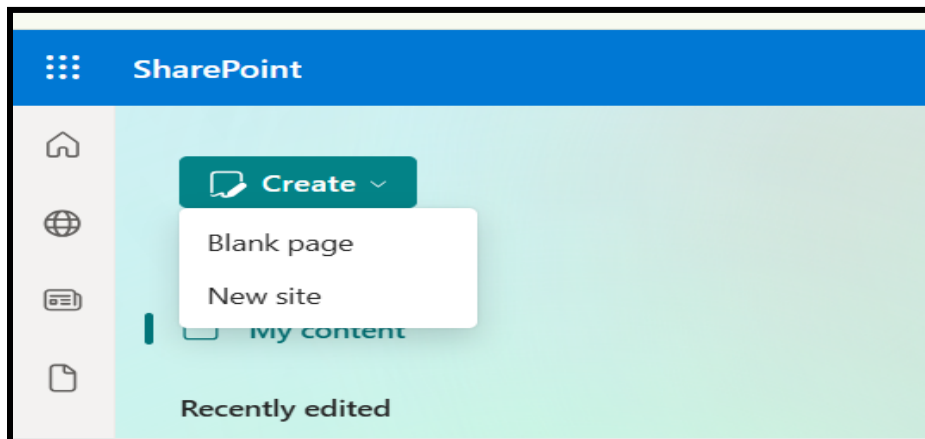

2. Select **SharePoint** from the catalog of apps.

3. From the left-hand menu, select **Create site**.

4. Select **Create** → **New Site**.

5. Team site as the type of site.

Create a site: Select the site type

Select the type of site you want to create. [Learn more about team sites](#) or [learn more about communication sites](#).

Team site

Create a private space to collaborate with your team.

- Track and stay updated on project status
- Share team resources and co-author content
- All site owners and members publish site content
- Can connect to other Microsoft 365 products

Communication site

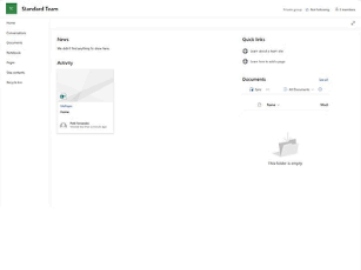

Share information that engages a broad audience.

- Create a portal or subject-focused site
- Engage dozens or thousands of viewers
- Few content authors and many site visitors

6. On the Select a template page, select the Standard team.

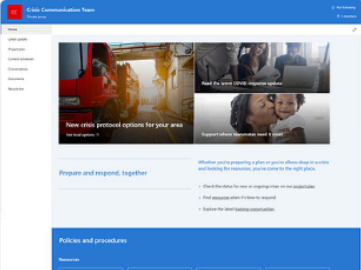

Select a template

From Microsoft From your organization

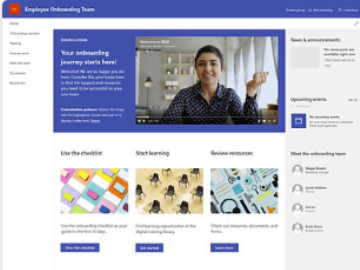

Standard team

Manage projects, share content, and stay connected with your team.

Crisis communication team

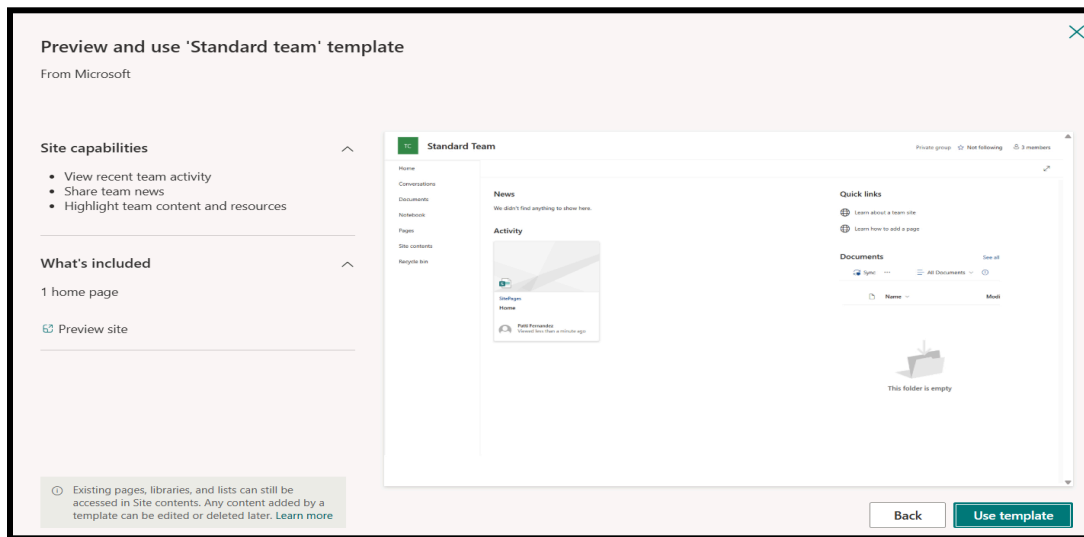

Centralize crisis communication, resources, and best practices.

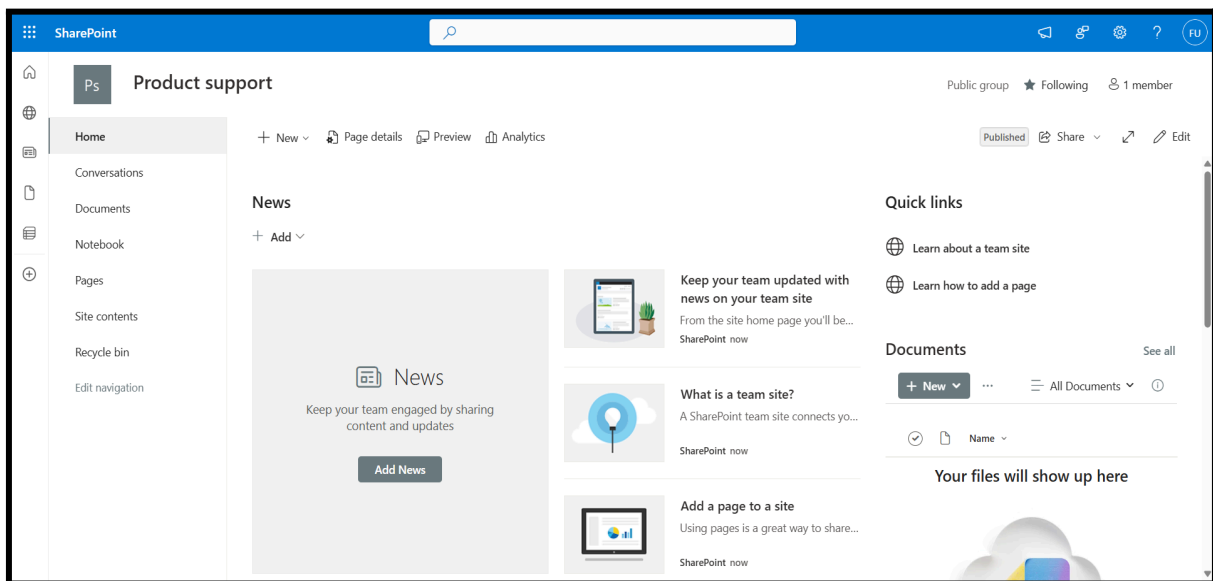

Employee onboarding team

Guide new employees through your team's onboarding process.

7. On the Preview page, select **Use template**.

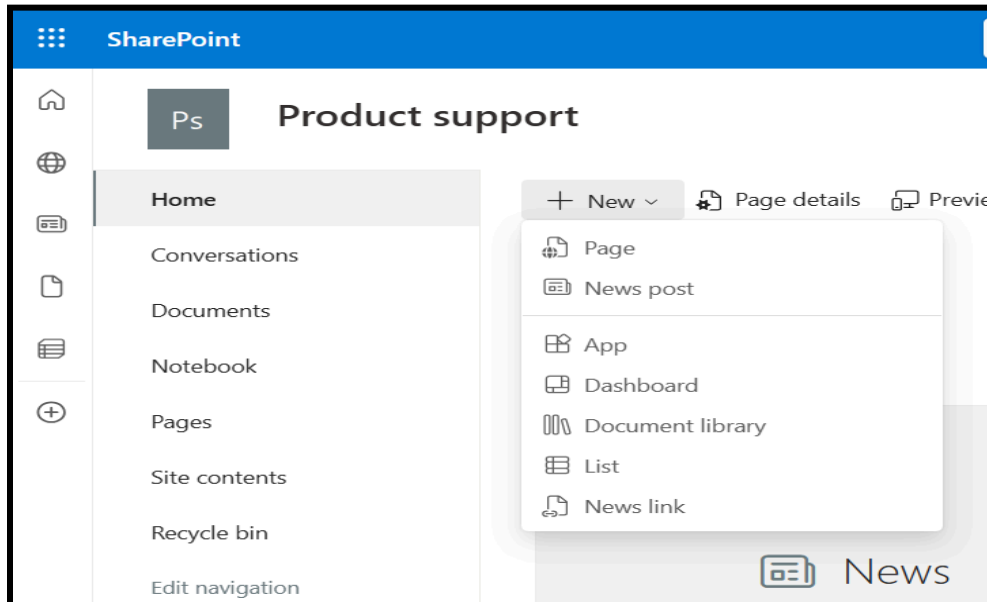

8. On the Give your site a name page, enter **Product support** then select **Next**.
9. On the next configuration page, change the **Privacy settings** to **Public**.
10. Select **Create site**. Creation of the site may take a few moments before the Finish button is activated.
11. Select **Finish**. You're navigated to your new SharePoint site in the browser.

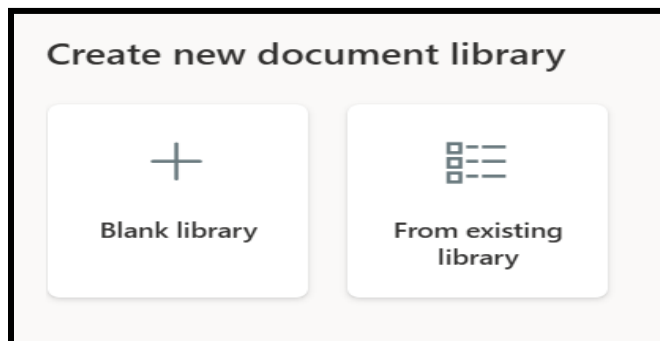

Create a document library

1. From the Product support SharePoint site, select the **New button** at the top of the page then select **Document library**.

2. On the Create a new document library page, select **Blank library**.

3. In the Name field, enter **Products** then select **Create**. You're navigated to the new document library.

Upload sample data

1. From the **Products library**, select the **Upload button** then select Files.
2. Navigate to the folder on your computer where you saved the sample files.
3. Upload to SharePoint.
4. Wait for the upload to complete. The files will now appear in the Products library in SharePoint.

Copy the SharePoint URL

Next, copy the direct URL to the site for use when configuring your agent's knowledge.

1. From the **Products library** page in SharePoint, select the Settings icon in the top right and choose Library settings then More library settings.
 2. Locate the Web address property. Your SharePoint site URL is the portion of the Web address that is in the format
`https://DOMAIN.sharepoint.com/sites/SITE_NAME/LIBRARY_NAME.`
Your URL should be in the format
<https://DOMAIN.sharepoint.com/sites/ProductSupport/Products>
where DOMAIN is your Microsoft 365 tenant domain.
 3. Copy your SharePoint site URL and save it for use in upcoming lab steps.
Do not include any portion of the URL that comes after "/Products".
-

Task 1 – Open Your Copilot

Step 1 - Open **Microsoft Copilot Studio**.

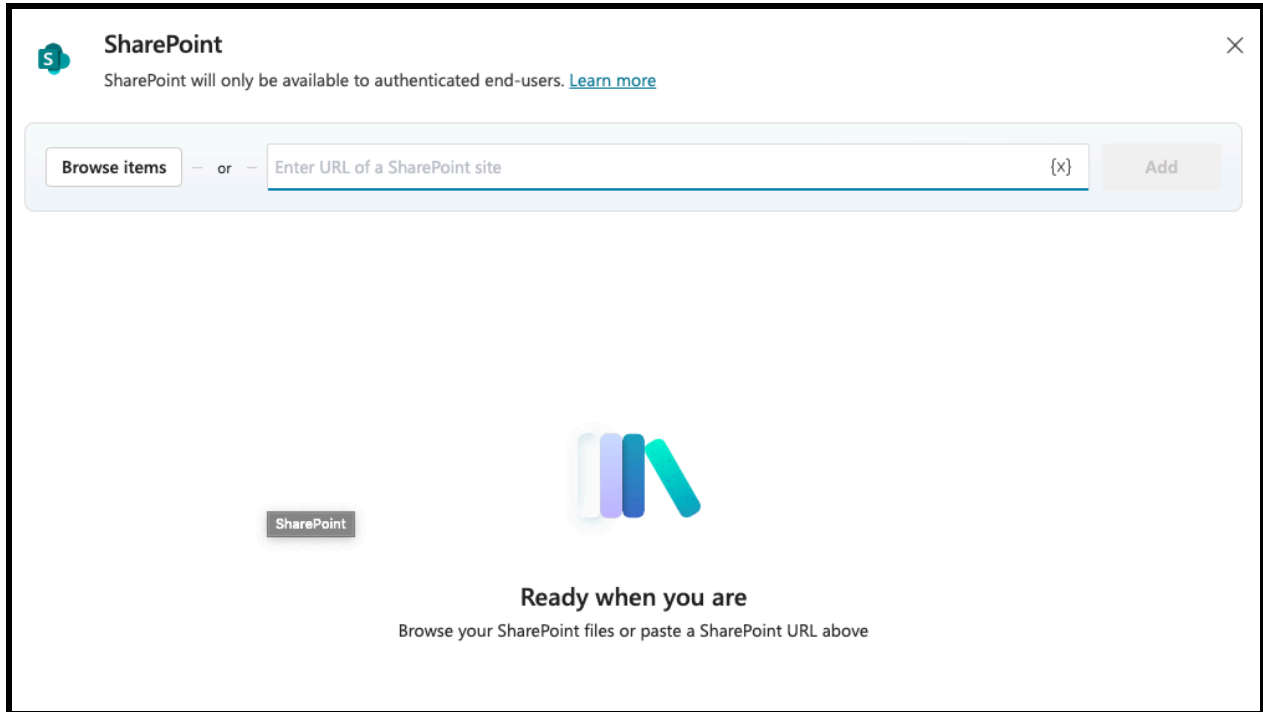

Step 2 - Open the agent created in the previous lab.

Task 2 – Add SharePoint Knowledge

Step 1 - From the left navigation menu, select **Knowledge**

Step 2 - Click **+ Add knowledge**

Step 3 - From the available knowledge sources, select **SharePoint**.

Task 3 – Connect the SharePoint Library

Step 1 - Paste the SharePoint Library URL.

For Example:

<https://contoso.sharepoint.com/sites/HR/Documents> (Use your custom url)

Step 2 - Alternatively, select **Browse items** and choose the required SharePoint library.

Step 3 - Click **Next** (or continue to the configuration screen, depending on your Copilot Studio version).

Click **Add to agent**

A detailed description helps Copilot Studio decide when this knowledge source should be used during response generation.

SharePoint
×

SharePoint will only be available to authenticated end-users. [Learn more](#)

or

{x}

Add

Link	Name	Description
https://sudosuai.sharepoint.com...	CMR_Warranty_Info_2026.pdf	This knowledge source provides information

Task 4 – Verify the Knowledge Source

Navigate back to the **Knowledge** page.

Confirm that the SharePoint source appears in the list with a successful status.

	HR assistance	Overview	Knowledge	Tools	Agents	Topics	Activity	Evaluation	Monitor	+1		Published 7/21/202
+ Add knowledge All Files Public website SharePoint												
Name	Type	Available to	Usage	Last modified	Status							
Microsoft Copilot Studio Documen...	Public website	HR assi...	General	Foundry User1 42 minutes ago	Ready							
CMR_Warranty_Info_2026.pdf	SharePoint	HR assi...	General	Foundry User1 15 seconds ago	Ready							

Task 5 – Test the Agent

Open the **Test your agent** pane.

Ask the following questions.

- What printer models are available?
- Which printer is suitable for a medium-sized office?

- Does the printer support duplex printing?
 - Which models support scanning to email?
-

Expected Result

Your Copilot should:

- Answer questions using documents stored in the SharePoint library.
 - Respect Microsoft 365 permissions.
 - Return answers only from content the signed-in user is authorized to access.
-
