

Build an Internal HR Knowledge Bot

Lab Duration: 30 Minutes

Difficulty: Intermediate

Lab Overview

In the previous labs, you connected different knowledge sources and configured your agent's instructions. In this lab, you will **bring everything together** by building an Internal HR Knowledge Bot.

Learning Objectives

After completing this lab, you will be able to:

- Build a complete HR Knowledge Bot.
 - Combine multiple knowledge sources into a single agent.
 - Verify that the agent selects the appropriate knowledge source.
 - Test end-to-end HR scenarios.
-

Business Scenario

Contoso employees frequently ask questions about:

- Leave policies
- Employee handbook
- Benefits
- HR contacts
- Office locations
- Company procedures

Instead of searching multiple systems, Contoso wants employees to ask a single HR Copilot that automatically retrieves information from the correct knowledge source.

Prerequisites

Before starting this lab, ensure you have completed:

-  Lab 14 – Public Website
 -  Lab 15 – PDF Knowledge
 -  Lab 16 – SharePoint Knowledge
 -  Lab 17 – Dataverse Knowledge
 -  Lab 18 – Prompt Instructions
-

Lab Instructions -

Task 1 – Review Your Knowledge Sources

Open your Copilot. Navigate to **Knowledge**

Verify that the following knowledge sources are available.

Knowledge Source	Status
Public Website	Ready
Employee Handbook (PDF)	Ready
HR SharePoint Library	Ready
Employee Dataverse Table	Ready

Task 2 – Review Agent Instructions

Navigate to **Overview**

Open the **Instructions** section.

Verify that your instructions include:

- HR Assistant role
- Professional tone
- Do not guess answers
- Use available knowledge sources
- Ask a follow-up question at the end

If required, update the instructions and click **Save**.

Task 3 – Test Different Knowledge Sources

Open the **Test your agent** pane.

Ask the following questions one by one.

Test 1 – Website Knowledge

What is Microsoft Copilot Studio?

Expected Result

The agent should answer using the configured public website.

Test 2 – PDF Knowledge

What is the company's leave policy?

Expected Result

The response should be based on the uploaded Employee Handbook PDF.

Test 3 – SharePoint Knowledge

Where can I find the onboarding documents?

Expected Result

The response should use information stored in the SharePoint library.

Test 4 – Dataverse Knowledge

Who is the manager of Rahul Sharma?

Expected Result

The response should retrieve data from the Dataverse table.

Task 4 – Test Unsupported Questions

Ask the following question:

Which mutual fund should I invest in?

Expected Result

The agent should politely decline or indicate that the question is outside the HR domain, based on the instructions configured in Lab 18.

Task 5 – Validate the User Experience

Verify that the responses:

- Are professional and concise.
- Use the appropriate knowledge source.
- Do not invent information.
- Follow the formatting rules defined in the instructions.
- Ask if the user needs additional help.

Screenshot 4: Final Conversation

Expected Result

Your Internal HR Knowledge Bot should:

- Answer HR questions accurately.

- Use Website, PDF, SharePoint, and Dataverse knowledge as appropriate.
- Follow the configured Agent Instructions.
- Avoid generating unsupported or fabricated information.
