

Exercise 2 - Create a workflow tool

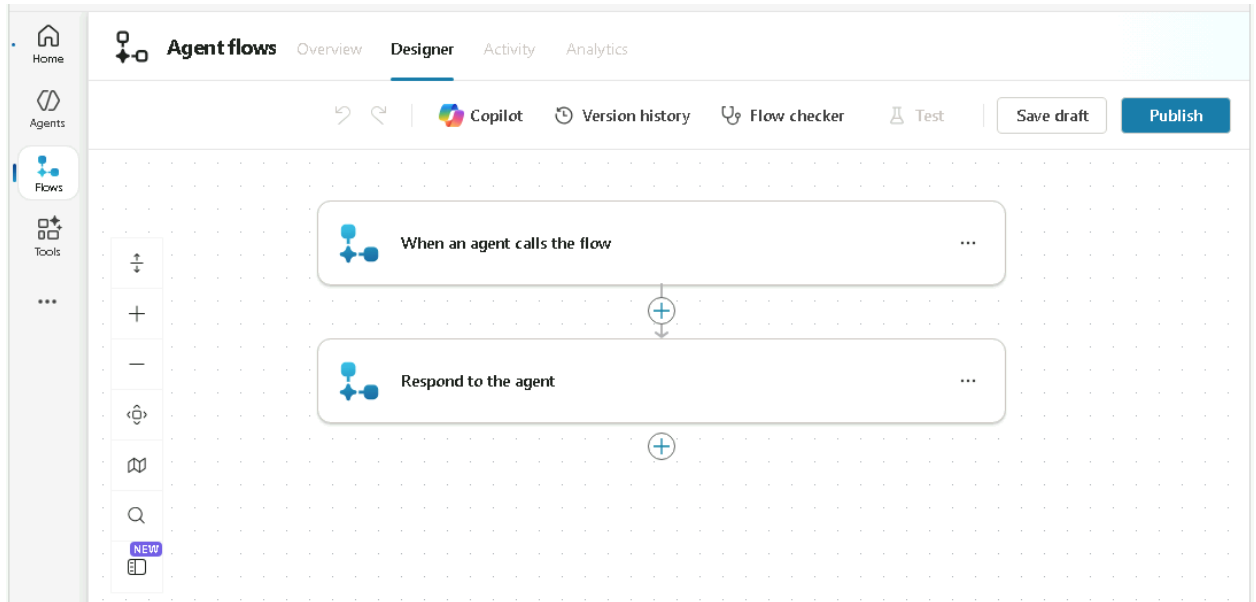

In this exercise, you create a workflow that sends a message to Microsoft Teams. You will add this workflow to the agent.

Task 2.1 – Create the Submit Leave Request workflow

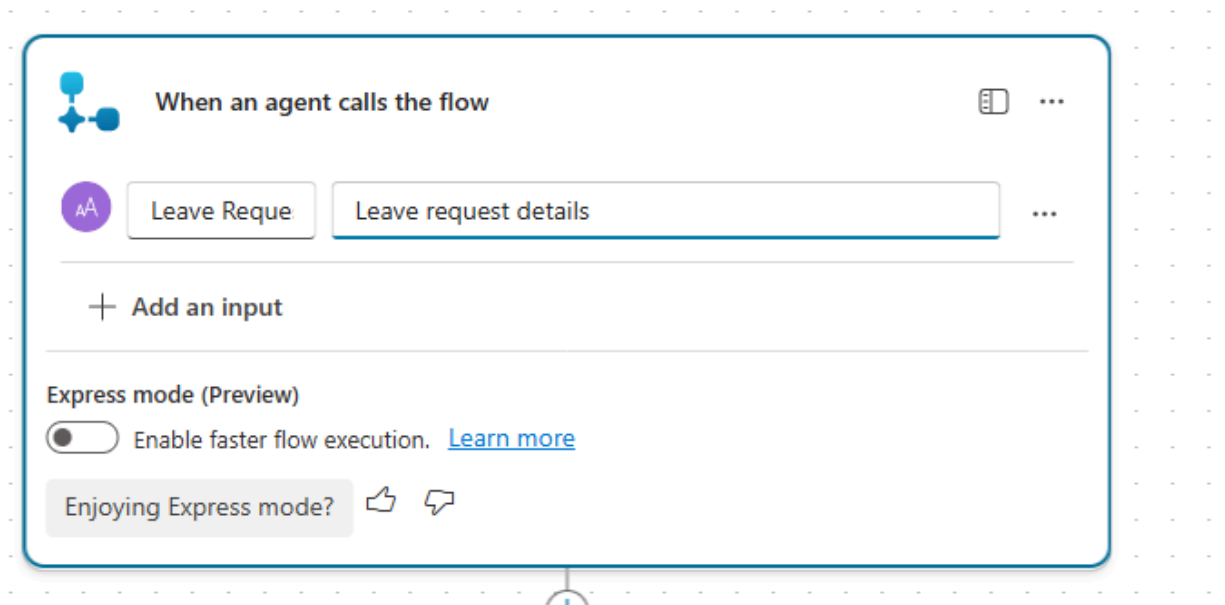

1. In Copilot Studio, select **Tools** in the left-hand navigation.

2. Select **+ New tool**.
3. In the **New Tool** dialog, select the **Agent flow** tile.
4. Verify that the **When an agent calls the flow** trigger and the **Respond to the agent** action have been added to the workflow.

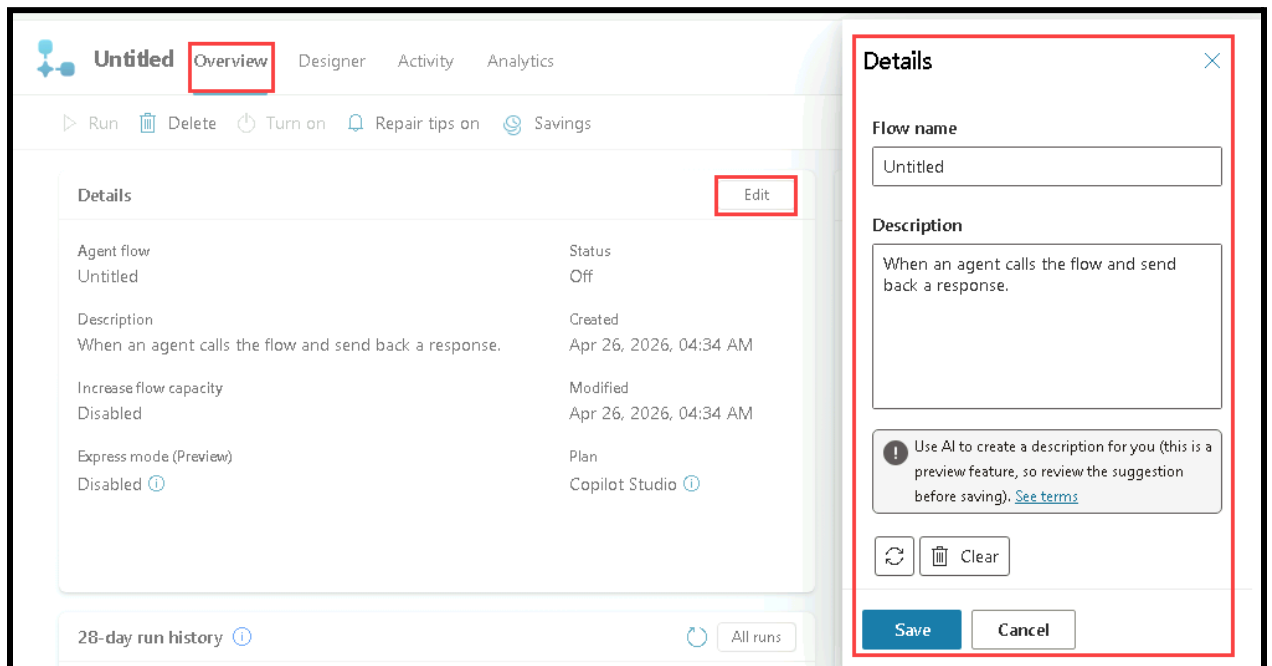

5. Select the trigger step **When an agent calls the flow** and select **+ Add an input**.
6. Select **Text**.
7. Enter **Leave Request** for **Input** and **Leave request details** for **Please enter your input**.

8. Select **Save draft** near the upper-right of the page.

9. Select the **Overview** tab.

10. In the **Details** section, select **Edit**.

11. In the **Details** pane, update **Flow name** to **Submit Leave Request**.

12. For **Description**, enter **Post an employee leave request to the HR Teams channel**.

Details✕

Flow name

Submit Leave Request

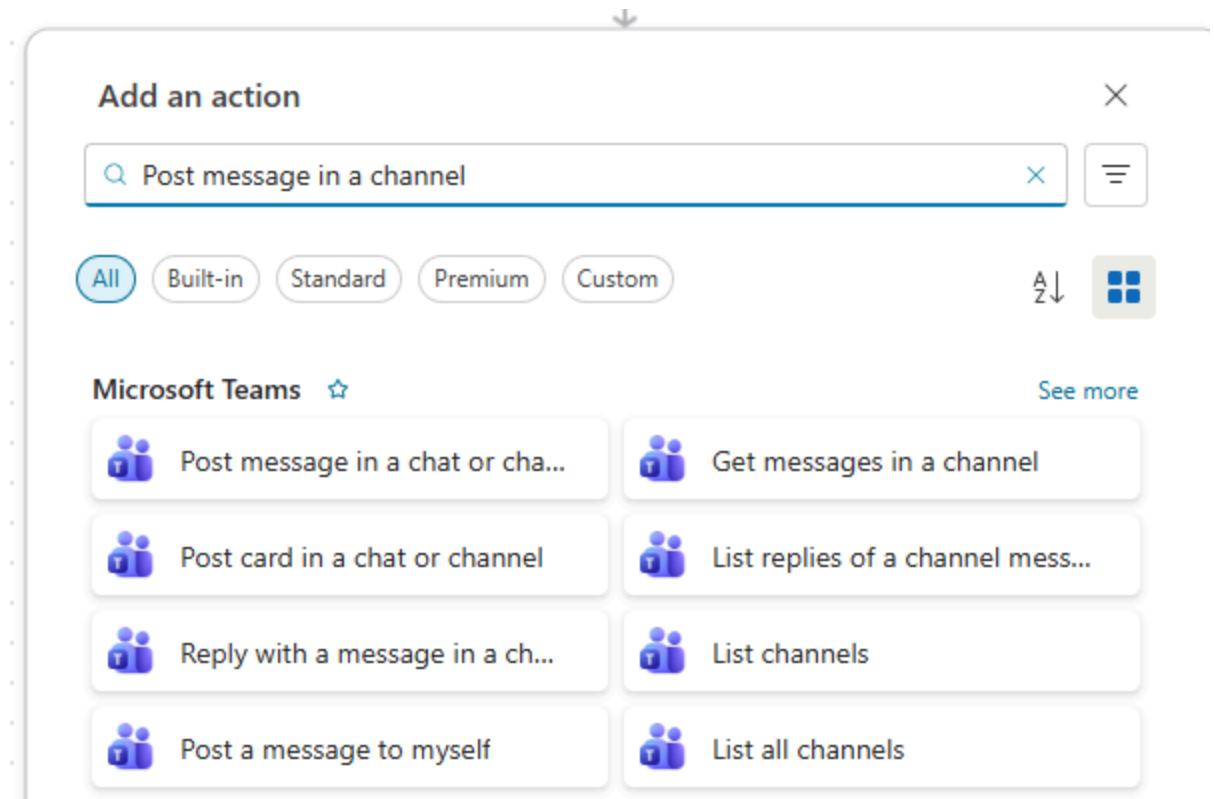

Description

Post an employee leave request to the HR Teams channel.

13. Select **Save**.

Task 2.2 - Post to Teams action

1. Select the **Designer** tab.
2. Select the **+** icon between the two steps in the workflow to insert a new action.
3. Select the **Post message in a chat or channel** action.

4. Select **Sign in**.

[!NOTE] If you receive the error “Failed to create OAuth connection: ClientWarning: The browser has blocked the connection authentication popup window”, select the **pop-up blocked** icon in the browser address bar and then select **Always allow pop-ups and redirects** from <https://copilotstudio.microsoft.com>.

5. Select your account.
6. In the **Confirmation required** dialog, select the **I have verified this request and trust the source** checkbox, then select **Allow access**.
7. For **Post as**, select **Flow bot**.
8. For **Post in**, select **Channel**.
9. For **Team**, select a team from the list, for example, **Leadership**.

10. For **Channel**, select a channel from the list, for example, **General**.

11. For *Message*, use **Dynamic Content** to select **Leave Request** .

Leave Request

Parameters

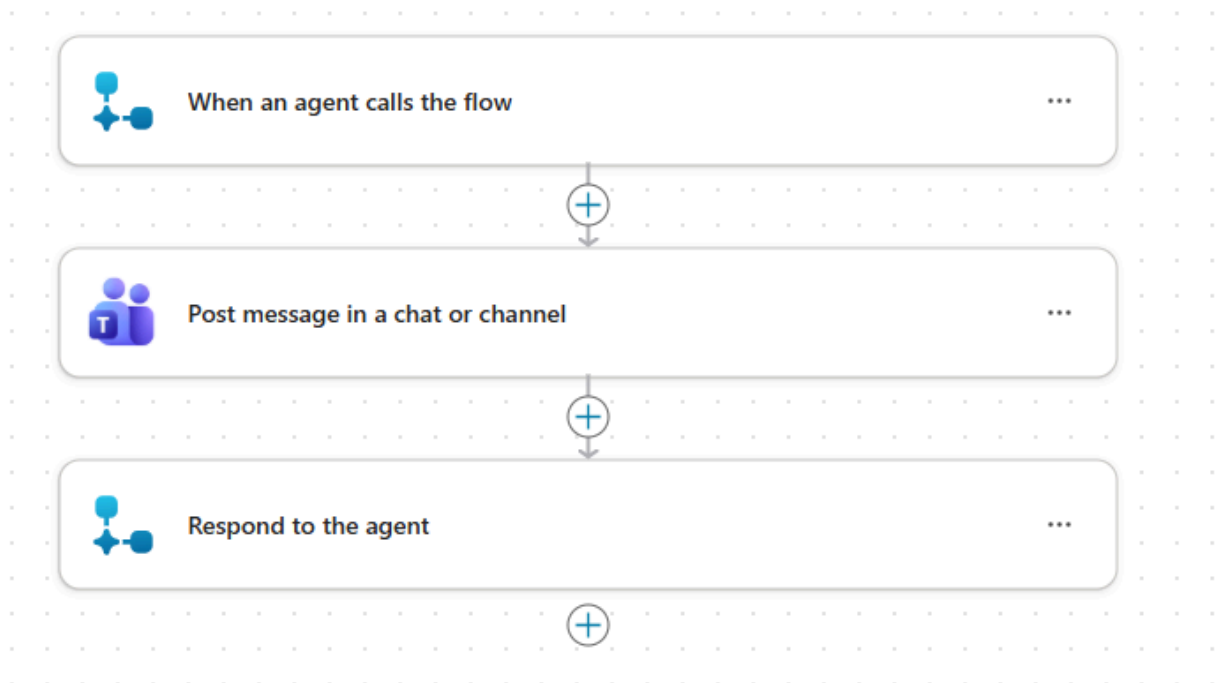

- Should the Peek Button Be Shown (msdyn_ShowPeekButton)
- SLA Web Client Deprecation Acknowledge (msdyn_SLAWebClientDeprecation)
- LOB Guid List for user expansion (msdyn_lineofbusinessfiltertemplatefeature)
- Should only leaf node selection be allowed (msdyn_AllowSelectLeafOnly)
- LOB Guid List (msdyn_lineofbusinessfiltertemplatefeature)
- When an agent calls the flow
 - Leave Request
 - Leave request details

Task 2.3 - Response action

1. Select the **Respond to the agent** node in the authoring canvas and select **+ Add an output**.
2. Select **Text**.
3. For *Enter a name*, enter **Message**.
4. For *Enter a value to respond with*, use **Dynamic Content** and select the **Message** link from the Teams action.

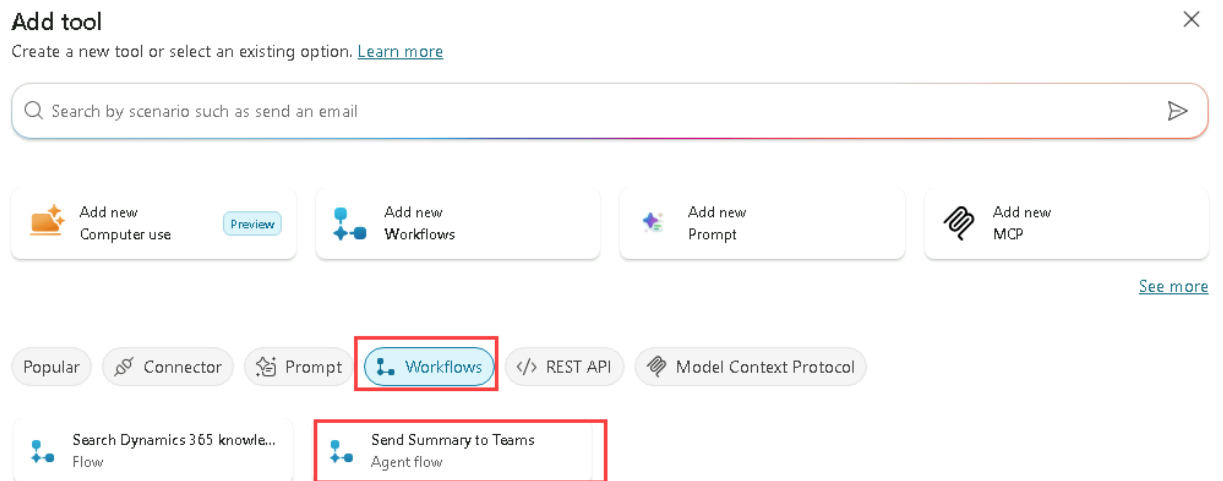

5. Select **Save draft** near the upper-right of the page.

6. Select **Publish** near the upper-right of the page.
7. In Copilot Studio, select **Tools** in the left-hand navigation to verify the workflow status is **Ready**.

Task 2.4 - Add workflow as a tool to the agent

1. Select **Agents** from the left navigation pane.
2. Open the **HR Employee Self-Service** agent.
3. Select the **Tools** tab.
4. Select **+ Add a tool**.
5. In the **Add tool** dialog, select the **Workflows** filter.

6. Select the **Submit Leave Request** workflow.
7. Select **Add and configure**.
8. In the **Details** section, for **Description**, enter **Submits an employee leave request to the HR team by posting the request details to a Microsoft Teams channel.**
9. Expand **Additional details** and select or enter the following:
 - **When this tool may be used:** Agent may use this tool at any time
 - **Ask the end user before running:** No
 - **Credentials to use:** End user credentials
 - **Description:** **Please sign in to notify Teams**

10. In the **Inputs** section, for *Fill using* select **Dynamically fill with AI**. This allows the agent to determine the appropriate input value dynamically from the conversation context.
11. In the **Completion** section, for **After running**, select **Write the response with generative AI**.

Completion

☒ Agent may use this tool at any time
☐ Only when referenced by topics or agents

Ask the end user before running
Recommended for sensitive or regulated domains or when making changes for the user

No

Credentials to use
Control whether this action uses credentials you provide, or those of the end user.

End user credentials

Description

Please sign in to notify Teams

30/1024

Inputs
+ Add input

What the tool accepts in order to run. Inputs will be filled in the order shown.

Input name	Fill using ⓘ	Value	
Task Summary*	Dynamically fill with AI		Customize

Completion

Specify what your agent does when it finishes using this tool.
After running:

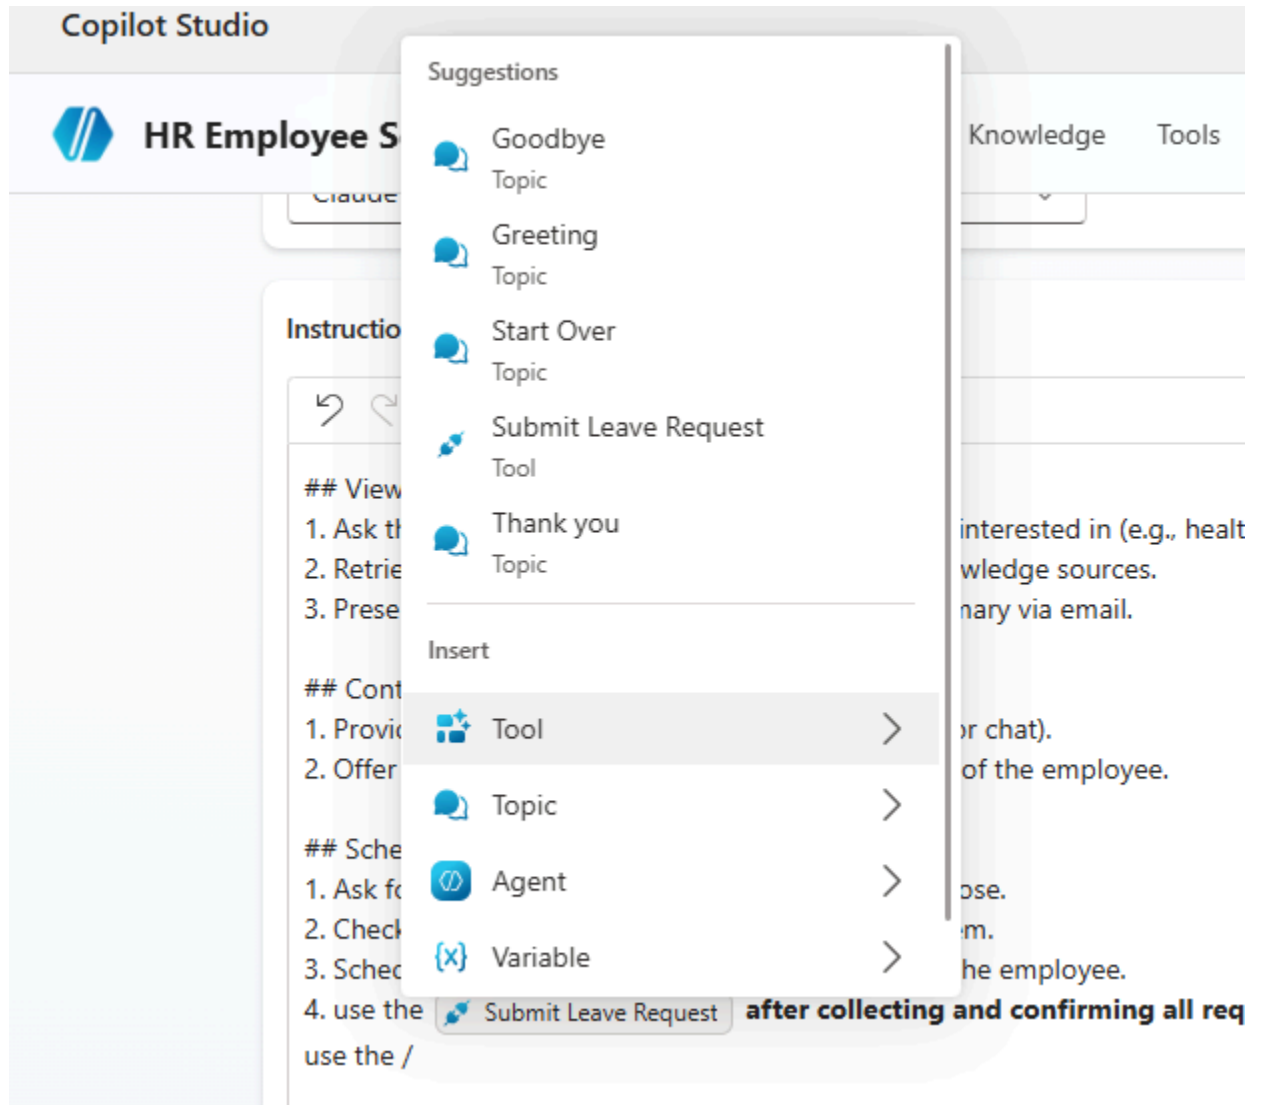

Write the response with generative AI

12. Select **Save**.

Task 2.5 - Update agent instructions

1. Select the **Overview** tab.
2. In the **Instructions** section, select **Edit**.
3. **Under the Step-by-Step Instructions in the agent instructions, add the following to the final step:**

Use the **/Submit Leave Request** tool after collecting and confirming all required leave request details from the employee.

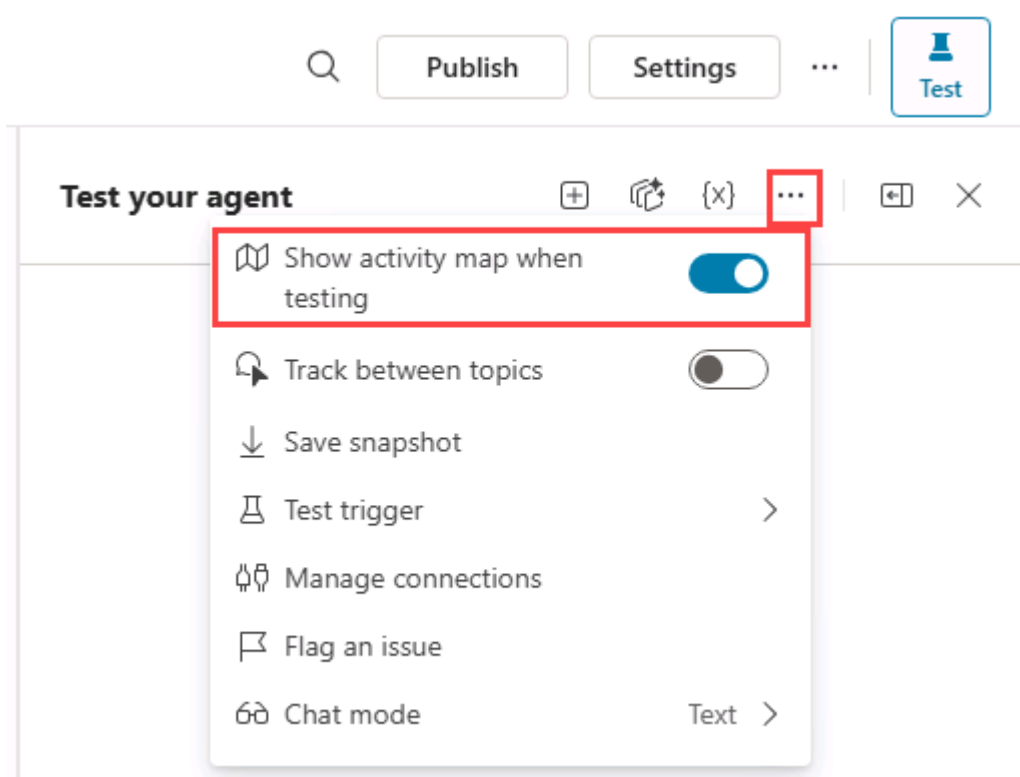

4. Select **Save**.

Task 2.6 - Test the workflow tool in the agent

1. Select the **Test** icon in the upper-right of the page to open the testing pane.

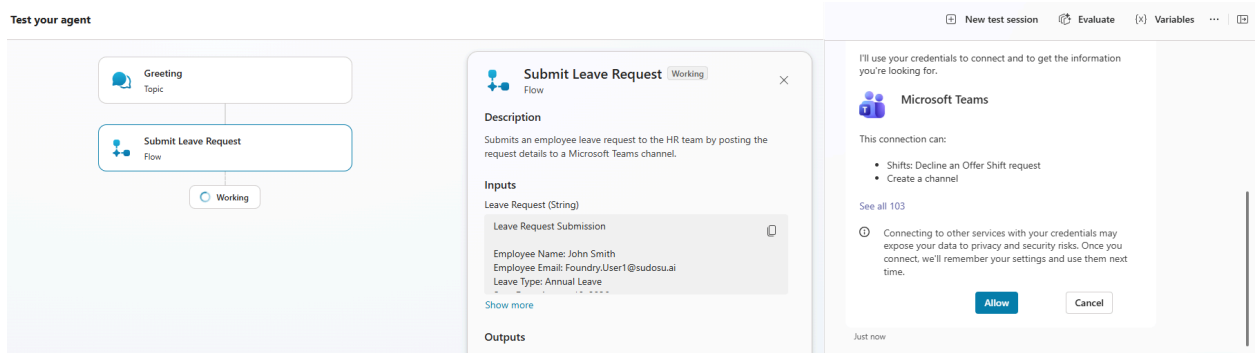

2. In the **Test** pane, select the ellipses (...) next to the variables {x} icon, and toggle **Show activity map when testing** to **On** and **Track between topics** to **Off**.

3. At the top of the **Test** pane, select the **Start new test session** icon +.
4. When the **Conversation Start** message appears, your agent will start a conversation. In response, let's try to trigger the topic that you've created:

I would like to apply for annual leave from August 10 to August 15. My name is John Smith, and the reason is a family vacation. Please submit my leave request to HR.

5. If prompted to connect to Microsoft Teams, select **Allow**.

6. In a new browser tab, navigate to <https://teams.cloud.microsoft/> and sign in if prompted.
7. Navigate to the Team and channel you selected earlier in the workflow and verify that the employee's leave request details were posted to the HR Teams channel.
