

Create a workflow tool that retrieves HR policy information from an Excel file in a topic

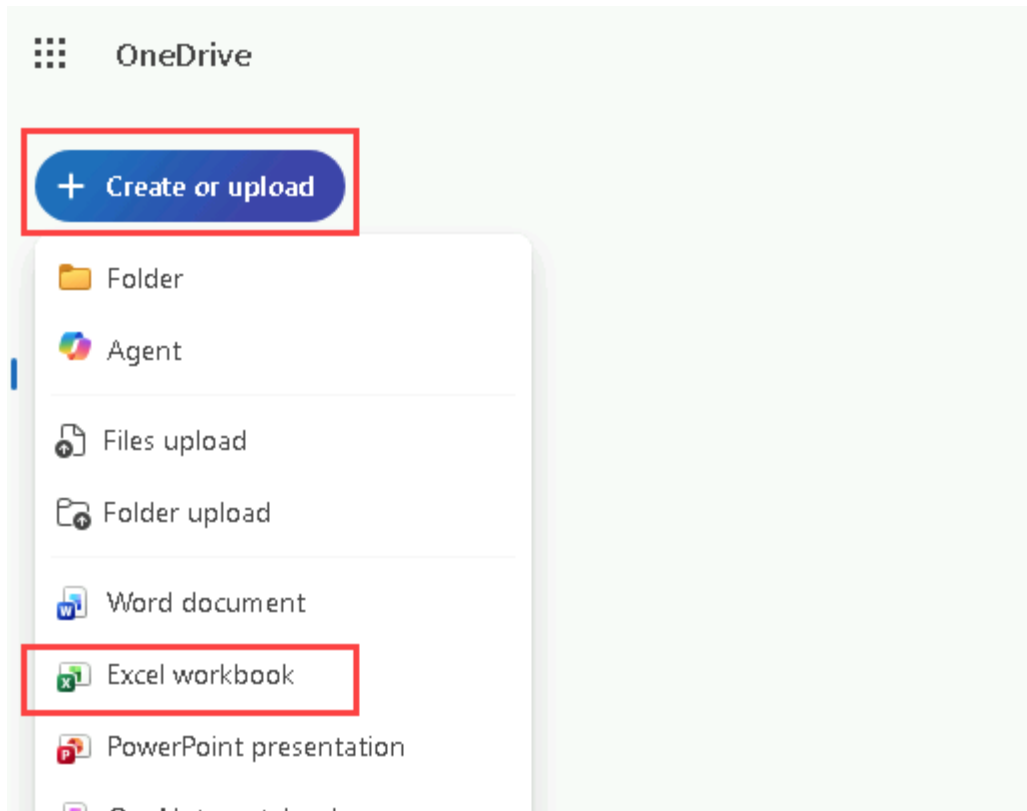

In this exercise, you will use Copilot to create an **HR Policies** topic from a description, create a workflow tool that retrieves **HR policy information** from an Excel file, and call the tool from the topic.

Task 3.1 - Create an Excel file

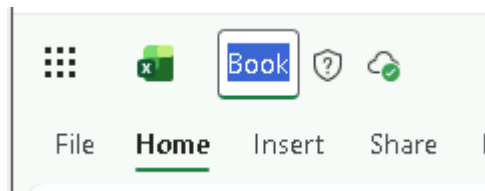

1. In Copilot Studio, select the **App launcher** icon in the upper-left corner, then select **OneDrive**.

2. If prompted, skip any welcome messages.
3. Select **+ Create or upload**.
4. Select **Excel workbook**.

5. In the upper-left of the **Excel workbook**, rename the file by selecting **Book** and entering **HR Policies**.

6. Create the following columns in the first row:
- Policy ID
 - Policy Name
 - Description
 - Department
 - Category
 - Status
7. In the second row, enter the following information for the first **HR policy**:
- HR-001

- Annual Leave Policy
- Employees are entitled to 20 days of paid annual leave per calendar year.
- Human Resources
- Leave
- Active

8. In the third row, enter for the second **HR policy** :

- HR-002
- Sick Leave Policy
- Employees may avail up to 10 days of paid sick leave annually with appropriate documentation.
- Human Resources
- Leave
- Active

9. In the fourth row, enter for the third **HR policy** :

- HR-003
- Health Insurance Benefits
- Eligible employees are covered under the company's health insurance plan.
- Human Resources
- Benefits
- Active

10. In the fifth row, enter for the fourth **HR policy** :

- HR-004
- Work From Home Policy
- Employees may work remotely up to two days per week with manager approval.
- Human Resources
- Workplace
- Active

HR Policies

13. Close the browser tab containing the Excel workbook.
14. In OneDrive, select My files and verify that the HR Policies Excel workbook is listed.
15. Close the OneDrive browser tab.

Task 3.2 – Create the Get HR Policy workflow

1. In Copilot Studio, in the left-hand navigation, select **Tools**.
2. Select **+ Add a tool**.
3. In the **Add tool** dialog, select the **Agent flow** tile. Change the **Flow name** to:

Get HR Policy
4. Verify that the **When an agent calls the flow** trigger and the **Respond to the agent** action have been added to the workflow.
5. Select the trigger step **When an agent calls the flow** and select **+ Add an input**.
6. Select **Text**.
7. Enter **Policy Category** for *Input* and **Policy Category of HRPolicies** for *Please enter your input*.

8. Select **Save draft** near the upper-right of the page.
9. Select the **Overview** tab.
10. In the **Details** section, select **Edit**.

11. In the **Details** pane, update **Flow name** to **Get HR Policy** .
12. For **Description**, enter **Retrieve HR policy information based on the selected policy category**.
13. Select **Save**.
14. Select the **Designer** tab.
15. Select the **+** icon between the two steps in the workflow to insert a new action.
16. Select the **List rows present in a table** action.
17. Select **Sign in** to create a connection.
18. In the **Sign into your account** dialog, select the account you are using for this lab environment (such as **MOD Administrator**), select the **I have verified this request and trust the source** checkbox, and select **Allow access**.
19. For **Location** select **OneDrive for Business**.
20. For **Document library** select **OneDrive**.
21. For **File**, browse and select the HR Policies workbook.
22. For **Table**, select **HRPolicies**.

List rows present in a table

File*
/HR Policies.xlsx

Table*
HRPolicies

Extract Sensitivity Label

23. Select **Show all**.

24. For **Filter query**, enter `Category eq ''`.

25. Move the cursor between the two single quotes and use Dynamic content to insert the Category input parameter.

This creates a filter like:

Category eq 'Policy Category'

Advanced parameters

Showing 6 of 6

Filter Query

Category eq 'Policy Category'

Order By

26. Select the **Respond to the agent** node in the authoring canvas and select **+ Add an output**.
27. Select **Text**.
28. For *Enter a name*, enter **HR Policy Details** .
29. For *Enter a value to respond with*, select the field, and then select the **Expression (fx)** option. Enter the following expression to convert the returned rows into text that matches the **Text** output type, and then select **Add**:

```
string(outputs('List_rows_present_in_a_table')?['body/value'])
```
30. Select **Save draft** near the upper-right of the page.
31. Select **Publish** near the upper-right of the page.
32. Select **Tools** in the left-hand navigation to verify the workflow status is **Ready**.

Task 3.3 – Add a topic to the agent

1. Select **Agents** from the left navigation pane.
2. Open the **HR Employee Self-Service** agent.
3. Select the **Topics** tab.
4. Select **+ Add a topic** and select **Add from description with Copilot**. A new dialog window appears.
5. In the **Name your topic** text box, enter **HR Policy Details**.
6. In the **Create a topic to...** text box, enter **Ask the user to choose an HR policy category from a list containing Leave, Benefits, Workplace, and Code of Conduct**.
7. Select **Create**.

8. Select the **Category** variable at the bottom of the question node to open **Variable properties**.
9. Under **Usage** select **Global (any topic can access)**.
10. Select **Save**.

Task 3.4 - Add workflow as a tool

1. Select **Agents** from the left navigation pane.
2. Open the **HR Employee Self-Service** agent.
3. Select the **Tools** tab.
4. Select **+ Add a tool**.
5. In the **Add tool** dialog, select the **Workflows** filter.
6. Select the **Get HR Policy workflow**.
7. Select **Add and configure**.
8. In the **Details** section, for **Description** enter *Retrieves HR policy information for a specified policy category.*
9. Expand **Additional details** and select or enter the following:
 - **When this tool may be used:** Only when referenced by topics or agents
 - **Ask the end user before running:** No
 - **Credentials to use:** End user credentials
 - **Description:** *Please sign in to retrieve HR policy information.*
10. In the **Inputs** section, for **Fill using**, select **Custom value** and then select the **Category** global variable.

Inputs + Add input

What the tool accepts in order to run. Inputs will be filled in the order shown.

Input name	Fill using i	Value
Priority *	Custom value v	{x} Global.Priority choice ...

11. In the **Completion** section, for **After running**, select **Write the response with generative AI**.
12. Select **Save**.

Task 3.5 - Add workflow tool to the topic

1. Select the **Topics** tab.
2. Select the **HR Policies** topic.
3. Under the **Question** node, select the **+** icon, select **Add a tool**, select the **Tool** tab, and then select the **Get HR Policy** tool.
4. Select **Save**.

Task 3.6 - Update agent instructions with the topic

1. Select the **Overview** tab.
2. In the **Instructions** section, select **Edit**.
3. Under the *Skills* in the agent instructions, add the following to the final step:
Use the **/HR Policies** topic to retrieve HR policy information.
4. Select **Save**.

Task 3.7 - Test the workflow tools

1. Select the **Test** icon in the upper-right of the page to open the testing pane.
2. In the **Test** pane, select the ellipses (...) next to the variables **{x}** icon, and toggle **Show activity map when testing** to **Off** and **Track between topics** to **On**.
3. At the top of the **Test** pane, select the **Start new test session** icon +.
4. When the **Conversation Start** message appears, your agent will start a conversation. In response, let's try to trigger the topic that you've created:

Show me the HR policies.

5. The HR Policies topic will be shown.
6. Select **Leave**.
7. If prompted to connect to **Excel Online (Business)**, select **Allow**.
8. The test pane should contain the **HR policies**.
9. In a new browser tab, navigate to <https://teams.cloud.microsoft/> and sign in if prompted.
10. Navigate to the Team and channel you selected earlier and verify that the HR policy details for the selected category were posted to the channel.

Summary

In this lab, you created workflow tools that are called by the agent using generative AI and from a topic.
