

Lab 7.2 – Create Topics with Copilot (Add from Description)

Lab Overview

In this lab, you will use **Copilot-assisted topic creation** in Microsoft Copilot Studio. Instead of building a topic manually, you will describe the business process in natural language and let Copilot generate the topic structure automatically.

Learning Objectives

By the end of this lab, you will be able to:

- Create a topic using **Add from description with Copilot**.
 - Write effective natural language descriptions.
 - Review and refine AI-generated topics.
 - Test the generated topic using the Test Agent panel.
 - Understand how Copilot accelerates topic authoring.
-

Business Scenario

You are working for **Contoso Learning Services**. Employees frequently ask questions about available training programs and certification paths.

Instead of manually building a topic, you will use Copilot to automatically generate a **Training Information** topic.

Task 1: Open Your Agent

- Navigate to **Copilot Studio** <https://copilotstudio.microsoft.com>
 - Select **Agents** from the left navigation pane.
 - Open the agent created in the earlier lab.
 - Select the **Topics** tab.
-

Task 2: Create a Topic Using Copilot

- Select **+ Add a topic**.
- Select **Add from description with Copilot**.

The screenshot shows a dialog box titled "Add from description with Copilot" with a close button (X) in the top right corner. Below the title, there is a prompt: "Write a description of what you'd like your agent to cover, and Copilot will create your topic. [Learn more](#)".

The dialog box contains two main input sections:

- Name your topic ***: A text input field containing the text "Training Information".
- Create a topic to... ***: A text input field containing the text "After receiving the name, thank the employee and offer assistance with training registration and certification learning paths."

Below these fields, there is a disclaimer: "AI-generated content can have mistakes. Make sure it's accurate and appropriate before using it. [Read terms](#)".

Under the heading "Or try one of these examples to get started", there are three example prompts, each preceded by a lightbulb icon:

- Let someone order a pizza, choosing from common pizza types and how many they want to order.
- Accept a user's name, age and date of birth and then repeat their responses back to them.
- Collect a user's street address, state and zip code. The user should be able to retry each question up to 4 times.

At the bottom right, there is a link "View more examples" and two buttons: "Create" (in blue) and "Cancel" (in white).

At the bottom left, there is a link "What does Copilot support?".

Topic Name - **Training Information**

Description

Enter the following description:

When employees ask about training programs, certification courses, or learning opportunities, greet the user and provide information about available training options.

Ask for the employee's name.

After receiving the name, thank the employee and offer assistance with training registration and certification learning paths.

- Select **Create**.

Expected Outcome

Copilot automatically generates:

- Trigger phrases
- Greeting messages
- Questions
- Conversation flow nodes

The new topic appears on the authoring canvas.

Task 3: Review the Generated Topic

Review the topic created by Copilot.

Verify that the topic contains:

Greeting Message

Welcome to Contoso Learning Services.

Question

What is your name?

Response Message

Thank you for contacting Contoso Learning Services. How can I help you with training and certification programs today?

Expected Outcome

The topic contains a complete conversational flow without manual node creation.

[\[learn.microsoft.com\]](https://learn.microsoft.com)

Task 4 : Test the topic

Use the Test Agent panel:

User: Training program

Expected Conversation:

Bot:

Published 7/20/2026

Publish

Just now

training programs

Hello! Thank you for your interest in our training programs, certification courses, and learning opportunities. Here are some of the available training options:

- Online training modules
- In-person workshops
- Certification courses
- Self-paced learning resources

I'm here to help you with any questions you may have.

Ask a question or describe what you need

0/2000

Task 5: Refine the Topic with Copilot

- Select **Copilot** from the topic toolbar.

- Enter the following instruction:

Add a question asking the employee for their preferred training area such as Power Platform, Copilot Studio, Microsoft 365 Copilot, or Azure.

- Select **Update**. [\[learn.microsoft.com\]](https://learn.microsoft.com)
- Select **Save**.

Expected Outcome

Copilot adds a new question node to capture the preferred training area.

Task 6 : Test the Topic

Use the **Test Agent** panel.

Click on **New Test Session**.

User - I want to know about training programs

Expected Conversation

Bot: Welcome to Contoso Learning Services.

Bot: What is your name?

User: Sourabh Taneja

Bot: Thank you Sourabh Taneja. How can I help you with training and certification programs today?

Bot: Which training area are you interested in?

- Power Platform

- Copilot Studio

- Microsoft 365 Copilot

- Azure

Expected Outcome

The topic triggers successfully and follows the AI-generated conversation flow.

Challenge Exercise (Later - After the session)

Enhance the topic by asking Copilot to:

Add a confirmation message summarizing the user's name and selected training area.

Then ask Copilot:

Create a different response for users interested in Microsoft 365 Copilot and Power Platform training.
